

CONTENTS

1.	Recycling Plastics from Municipal Solid Waste: An Overview	1
OVERVIEW OF RECYCLING TECHNOLOGY		
2.	Environmental Compatibility of Polymers	16
3.	Recycled Plastics: Product Applications and Potential	26
4.	Miscibility in Polymer Recycling	39
5.	Automotive Recycling in Japan	49
6.	Pyrolysis of Polymers	60
STABILIZERS, ADDITIVES, AND CHARACTERIZATION		
7.	Stabilization of Recycled Plastics	74
8.	Evaluation of Mechanical Properties of Recycled Commingled Post Materials	88
9.	Accelerated Warpage and Water Sorption Tests on Recycled Plastic Posts	113
10.	Phosphite Stabilizers in Postconsumer Recycling	134
11.	Selected Aspects of Poly (ethylene terephthalate) Solution Behavior: Application to a Selective Dissolution Process for the Separation of Mixed Plastics	147
12.	Evaluation of Polymer Degradation in Controlled Microbial Chemostats	163
POLYMER RECOVERY		
13.	Separation of Thermoplastic by Density Using Neat-Critical and Supercritical Carbon Dioxide and Sulfur Hexafluoride	172
14.	Recoverable Polyimide Copolymers	186
15.	Incorporating Postconsumer Recycled Poly (ethylene Terephthalate): A New Polyester Resin	196
BLENDS AND APPLICATIONS		
16.	Recycling Poly (ethylene terephthalate) in Unsaturated Polyester Composites	206
17.	High-Density Polyethylene – Poly (ethylene terephthalate) Blends: Compatibilization and Physical Properties	215
18.	Composite Materials from Recycled Multilayer Polypropylene Bottles and Wood Fibers	232
19.	Blends of Nylon 6 and Polypropylene with Potential Applications in Recycling: Effects of Reactive Extrusion Variables on Blend Characteristics	241
20.	Properties of High-Density Polyethylene from Postconsumer Recycled Containers	258
21.	Multilayer Packaging in the Environment: One Company's Positions and Programs	266
22.	Recycling of Reaction Injection Molded Polyurethanes	272
23.	Technical Aspects of Vinyl Recycling	296
