

# Contents

Preface .....	vii
1. Introduction to Adhesives.....	1
1.1 Cyanoacrylates .....	1
1.1.1 Types of Cyanoacrylate .....	3
1.2 UV-curing Adhesives.....	9
1.2.1 The Curing Process .....	9
1.2.2 Health and Safety with UV .....	13
1.2.3 The Curing Equipment.....	13
1.2.4 Curing Adhesive Tack-free .....	14
1.2.5 Types of UV Adhesives.....	16
1.2.6 Benefits of UV Adhesives.....	17
1.3 Two-part Acrylics .....	17
1.4 Epoxies.....	19
1.4.1 Advantages and Disadvantages of Epoxies.....	21
1.5 Flexible Adhesive Sealants .....	21
1.5.1 Silicone Adhesive Sealants.....	22
1.5.2 Polyurethane Adhesive Sealants .....	23
1.5.3 Modified Silane Adhesive Sealants .....	24
1.6 Hot Melt Adhesives .....	25
1.6.1 Reactive Hot Melts .....	25
2. Engineering Thermoplastics.....	27
2.1 Introduction .....	27
2.2 Amorphous Thermoplastics.....	27
2.3 Semi-crystalline Polymers .....	29
2.4 Adhesive Performance on Thermoplastics.....	31

2.4.1	ABS.....	32
2.4.2	LCP.....	32
2.4.3	Polyamide.....	33
2.4.4	PBT.....	34
2.4.5	PC.....	36
2.4.6	PEEK.....	37
2.4.7	PES and PUS.....	38
2.4.8	PE.....	39
2.4.9	PET.....	40
2.4.10	PMMA.....	40
2.4.11	POM.....	41
2.4.12	PPO.....	42
2.4.13	PPS.....	43
2.4.14	PP.....	43
2.4.15	PS.....	45
2.4.16	PTFE.....	46
2.4.17	PVC.....	47
2.5	General Comments on Adhesive Bonding of Thermoplastics.....	47
3.	Engineering Thermoset Plastics.....	51
3.1	Introduction.....	51
3.2	Adhesive Performance on Thermoset Plastics.....	53
3.2.1	Diallyl Phthalate (DAP).....	54
3.2.2	Epoxies.....	55
3.2.3	Phenolics.....	55
3.2.4	Polyester (Thermoset).....	56
3.2.5	Polyurethanes.....	57
3.2.6	Polyimides.....	58
3.3	General Comments on Adhesive Bonding of Thermoset Plastics.....	59
4.	Elastomers and Thermoplastic Elastomers (TPE).....	61
4.1	Introduction.....	61
4.2	Adhesive Performance on Elastomers.....	61
4.2.1	Butyl Rubber.....	62
4.2.2	Copolyester TPE.....	63

4.2.3	Ethylene Acrylic (EEA) Rubber .....	64
4.2.4	Ethylene Propylene Diene Monomer Rubber (EPDM) .....	64
4.2.5	Ethylene-Vinyl Acetate Co-polymer (EVA) .....	65
4.2.6	Fluorosilicone Rubber .....	66
4.2.7	Natural Rubber.....	66
4.2.8	Nitrile Rubber.....	67
4.2.9	Neoprene Rubber.....	68
4.2.10	Polyisoprene.....	68
4.2.11	Polyolefin Elastomers .....	68
4.2.12	Silicone Rubber .....	70
4.2.13	Styrene-Butadiene Rubber (SBR).....	70
4.2.14	Styrenic TPE .....	70
4.2.15	Thermoplastic Vulcanisates (TPV).....	72
4.3	General Comments on Bonding of Elastomers .....	72
5.	Joint Design.....	75
5.1	Introduction .....	75
5.2	Lap Joint .....	75
5.2.1	Joint Width versus Joint Overlap .....	76
5.2.2	Optimising Joints to Minimise Stress .....	78
5.3	Double Lap Joint (Tongue and Groove).....	80
5.4	Cylindrical Joints.....	81
5.4.1	Design Details .....	82
5.4.2	Cross Holes.....	84
5.4.3	Blind Holes .....	85
5.5	Butt Joint.....	86
5.6	Bond Line Thickness.....	88
5.7	Thermal Effects .....	89
5.8	Selecting the Viscosity of the Adhesive.....	89
5.9	Surface Preparation .....	91
6.	Bonding of Low-energy Plastics and Rubbers .....	93
6.1	Surface Wetting.....	93
6.2	Measuring Surface Energy .....	97
6.3	Surface Treatments .....	97

6.3.1	Abrasion .....	98
6.3.2	Corona Discharge .....	98
6.3.3	Plasma Treatment.....	98
6.3.4	Flame Treatment .....	98
6.3.5	Use of Primers.....	99
6.4	Two-part Acrylics .....	99
7.	Selecting the Adhesive .....	101
7.1	Introduction .....	101
7.2	Factors for Consideration .....	102
7.2.1	Selection of Materials.....	102
7.2.2	Adhesive Performance.....	103
7.2.3	Durability and Long Term Performance and Temperature Resistance.....	104
7.2.4	Surface Preparation.....	104
7.2.5	Ease of Application .....	105
7.2.6	Joint Design .....	105
7.2.7	Viscosity.....	106
7.2.8	Cure Speed.....	107
7.2.9	Gap-filling Capability.....	107
7.2.10	Sealing Capability .....	107
7.2.11	Health and Safety (H&S) .....	108
7.2.12	Approvals .....	111
7.2.13	Recycling Adhesives .....	111
7.3	A Summary for Adhesive Selection .....	112
8.	Dispensing Adhesives in Production .....	115
8.1	Basic Principles .....	115
8.1.1	Single- or Two-part Adhesive .....	115
8.1.2	Viscosity (see Section 5.8) .....	116
8.1.3	Cycle Time .....	118
8.1.4	Cure Method .....	118
8.1.5	Dispense Quantity.....	118
8.1.6	Open Time .....	120
8.1.7	Health and Safety.....	120

8.1.8	Cost .....	121
8.2	Dispensing Systems .....	121
8.2.1	Manual Units .....	122
8.2.2	Semi-automatic Dispensers.....	123
8.2.3	Syringe Dispensing .....	123
8.2.4	Pressure Pot Dispensing .....	123
8.3	Automatic Systems .....	125
9.	Durability and Environmental Testing.....	127
9.1	Introduction .....	127
9.1.1	Surface Finish and Surface Preparation .....	127
9.1.2	Joint Design .....	128
9.1.3	Substrate Bonded .....	129
9.2	Effect of Humidity and Water Absorption .....	130
9.3	Durability of Cyanoacrylates .....	130
9.3.1	Cyanoacrylates for Medical Applications.....	132
9.4	Durability of UV-curing Adhesives.....	132
9.4.1	UV Adhesives for Medical Applications .....	133
9.5	Durability of Two-Part Acrylics .....	135
9.6	Durability of Epoxies.....	135
9.7	Environmental Testing.....	135
10.	Troubleshooting .....	139
10.1	‘No Glue’ – Inspecting for the Presence of Adhesive .....	139
10.1.1	‘No Glue’ – Verifying the Adhesive Has Been Dispensed .....	140
10.1.2	‘No Glue’ – Air Bubbles and Voids.....	141
10.1.3	‘No Glue’– Destructive and Non-destructive Methods .....	142
10.1.4	‘No Glue’ – Other Factors.....	142
10.2	‘No Cure’ .....	143
10.2.1	‘No Cure’ – Odour.....	143
10.2.2	‘No Cure’ – Factors Inhibiting Cure.....	143
10.2.3	‘No Cure’ – Disturbing Partially Cured Adhesive.....	144
10.2.4	‘No Cure’ – Differential Scanning Calorimetry (DSC).....	144
10.2.5	‘No Cure’ – Adhesive Curing Problems .....	145

*Practical Guide to Adhesive Bonding of Small Engineering Plastic and Rubber Parts*

- 10.2.6 Blooming of Cyanoacrylates ..... 145
- 10.3 ‘No Stick’ ..... 148
  - 10.3.1 Theories of Adhesion ..... 148
  - 10.3.2 Cohesive ..... 149
  - 10.3.3 Adhesive Failure..... 150
  - 10.3.4 Substrate Failure ..... 151
- 10.4 No Performance ..... 152
  - 10.4.1 Surface Analysis ..... 153
  - 10.4.2 Defining the Failure Mode ..... 153
- Abbreviations..... 155
- Author Index..... 157
- Subject Index..... 159
