

CONTENTS

RUBBER MODIFICATION OF PLASTICS

Introduction	1
Perspectives in Polyblends	3
Crosslinking of Polybutadiene Induced by Free Radicals	21
Mechanism of Particle Formation in Rubber-Modified Vinyl Polymers	35
Rubber-Reinforced Plastics: Graft Polymer versus Polymer Blends	41
Analytical Methods for the Characterization of Polyblends	53
Molecular Structure Analysis of Graft Polymers	67

PLASTIC MODIFICATION OF ELASTOMERS

Introduction	81
Effects of Variation in the Individual Polymers Used in NBR/PVC Blends	83
Investigation of Factors Influencing Physical Properties of NBR/PVC Blends	95
Some Rheological Properties of a Linear-Gel Polymer System	127
Stiffening of Elastomers by Organic Fillers	143
Polymeric Fillers as Models for the Reinforcement of Elastomers	155

MECHANICAL BEHAVIOR GLASSY POLYMERS AND COMPOSITES

Introduction	161
Stress-Strain Behavior of Rubber-Reinforced Glassy Polymers	165
Inhomogeneous Deformation and Yielding of Glasslike High Polymers	175
An Equation for the Yield Stress of a Glassy Polymer	201
The Role of Crazing in the Mechanism of Fracture of Glassy Polymers	215
Effects of Polymer Structure on Impact Properties	237
Author Index	253
Subject Index	253
