

CONTENTS

Volume 1

1. Polymer Reaction Engineering, an Integrated Approach	1
2. Polymer Thermodynamics	17
3. Polycondensation	57
4. Free-radical Polymerization: Homogeneous	153
5. Free-radical Polymerization: Suspension	213
6. Emulsion Polymerization	249
7. Ionic Polymerization	323
8. Coordination Polymerization	365
9. Mathematical Methods	431
10. Scaleup of Polymerization Processes	533

Volume 2

11. Safety of Polymerization Processes	553
12. Measurement and Control of Polymerization Reactors	595
13. Polymer Properties through Structure	679
14. Polymer Mechanical Properties	721
15. Polymer Degradation and Stabilization	757
16. Thermosets	833
17. Fibers	911
18. Removal of Monomers and VOCs Polymers	971
19. Nano-and Microstructuring of Polymers	995
20. Chemical Analysis for Polymer Engineers	1015
21. Recent Developments in Polymer Processes	1047
Index	1083
