

CONTENTS

1	The Good, The Bad and The Ugly in the Science and Technology of Antioxidant Grafting on Polymers	1
2	Polymer Bound Stabilizers: A Review of Past and Present	21
3	Formation and Role of Conjugated Cyclic Dienones in Polymer Stabilization	36
4	Some Antioxidant Chemistry Revisited	62
5	Alkyl Hydroxybenzyl Thioethers: Efficiency and Mode of Action in Elastomer Stabilization	71
6	Organic Phosphites as Polymer Stabilizers	90
7	Intumescent Fire Retardant Epoxy Resins	108
8	Char Enhancing Approaches to Flame Retarding Polymers	135
9	Review of Synergists used with Halogen Flame Retardants	151
10	Highly Halogenated Phosphorus and Nitrogen Flame Retardants	182
11	Low-Valent Metal as Reductive Crosslinking Agents: A New Strategy for Smoke Suppression of Poly (vinyl chloride)	195
12	Graft Copolymerization as a Strategy for Flame Retardancy	218
13	Flame Retardant Polymers from Monomer Additives	235
14	Flammability Studies of Polymer Layered Silicate Nanocomposites: Polyolefin, Epoxy and Vinyl Ester Resins	249
15	Nanocomposites Produced Utilizing a Novel Ion-Dipole Clay Surface Modification	266
16	Advances in Laser Marking Through the Use of Custom Colorants	281
	Index	291
