

CONTENTS

1	Uses and applications of polymers	1
1.1	Introduction	1
1.2	Polymerization	7
1.3	Structure and properties	33
1.4	Control of polymer syntheses	41
	References	43
2	Polymer characterization	45
2.1	Introduction	45
2.2	Dissolution of polymers	47
2.3	Lattice theory	48
2.4	Chain configuration and size in solution	53
2.5	Measurement of molecular weight	55
2.6	Measurement of molecular weight distribution	64
2.7	Light-scattering photometry	81
	References	85
3	Mathematical modeling of polymerization kinetics	87
3.1	Introduction	87
3.2	Molecular weight distributions and their moments	89
3.3	Mathematical techniques for modelling and other approximate methods	94
3.4	Discrete transform methods	99
3.5	Moments in polymerization kinetics	104
3.6	Statistical treatment of polymerization problems	109
	References	122
4	Polymerization reactor design	125
4.1	Factors in reactor design	125
4.2	Choice of phases	134
4.3	Choice of reactor types	137
4.4	Separation and recovery systems	141
4.5	Design fundamentals	143
	References	147

5	Reactor operation and control	148
5.1	Reactor selection	149
5.2	Reactor operation	158
5.3	Instrumentation	166
5.4	Process control strategies	177
	References	200
6	Some more general process design considerations	203
6.1	Mechanical design of a stirred tank reactor	204
6.2	Reaction injection moulding	212
6.3	Design of a plastics recycling process	220
	References	230
	Index	233
