

CONTENTS

<b>EXECUTIVE SUMMARY</b>	<b>1</b>
Introduction	1
ECUT Biobased Materials Goals	2
Assessment of Biobased Materials	4
Conclusions	10
References and Notes	12
<b>PART I : MATERIALS FROM RENEWABLE RESOURCES AND THEIR PROPERTIES</b>	
1. STRUCTURAL MATERIALS FOR THE AUTOMOBILE OF THE FUTURE: COMPOSITE MATERIALS	16
Introduction	16
Automobile Industry	19
Biobased Materials in the Automotive Industry	26
References	32
2. RECENT ADVANCES IN LIGNOCELLULOSIC-DERIVED COMPOSITES	35
Chemical Modification of Lignocellulosic Materials	37
Improvements in Properties of Lignocellulosic Materials	37
Combination of Lignocellulosic with Other Materials	47
Future Opportunities	53
References	53
3. CELLULOSE GRAFTING: PAST, PRESENT AND FUTURE	58
Introduction	58
Earlier Research—1953-1984	58
Present Situation—1958-1988	65
Future Research needs	66
International Aspects	68
References	68

4.	LIGNIN: PROPERTIES AND MATERIALS	70
	Introduction	70
	Macromolecular Structure and Properties	70
	Materials	71
	Need for Future Research	73
	International Activities	73
	Conclusions	74
	Appendix–Papers Presented at the Symposium on Lignin: Properties and Materials	75
5.	MATERIALS FROM RENEWABLE RESOURCES	78
	New Materials from Wood	78
	Priorities for Research on the Utilization of Biobased Materials	79
	Conclusions	79
	References	80
6.	CHITIN: THE NEGLECTED BIOMATERIAL	81
	Chitin/Chitosan	83
	Future Developments in Chitin/Chitosan Research	86
	References	87
7.	STARCH-BASED PLASTICS	90
	Introduction	90
	Northern Regional Research Center Technologies	90
	St. Lawrence Starch Technology	107
	The Michigan Biotechnology Institute/Purdue Technology	112
	References	112
8.	BIODEGRADATION OF PLASTICS	115
	Why Degrade Plastics?	115
	History	116
	Biodegradation of Standard Plastic Formulations	116
	Biodegradable Plastics	117
	Need for Future Research	118
	References	118

## **PART II : BIOPRODUCTION OF MATERIALS**

9.	ADVANCES IN CELLULOSE BIOSYNTHESIS	122
	Background	122
	Diversity and Uses of Cellulose	122
	New Sources of Cellulose	123
	Concluding Remarks: The Future	127
	References	127
10.	BIOGENESIS AND BIODEGRADATION OF PLANT CELL WALL POLYMERS	129
	Introduction	129
	Cellulose	129
	Lignin	133
	Other Aromatic Polymers	138
	References	139
11.	ADVANCES IN PROTEIN-DERIVED MATERIALS	144
	Why Study Protein-Based Materials	144
	Current Status	144
	Need for Future Research	150
	References	152
	APPENDIX: EXAMPLES OF RESEARCH ACTIVITIES IN JAPAN	154
	Recent Progress of Chemical Modification of Wood Japan	154
