

CONTENTS

1	Introduction	1
1.1	Polymers	1
1.2	Polymer-Based Industries	2
1.3	Feedstocks for Polymers	9
1.4	Polymer Science	13
1.5	Future Trends	14
	Problems	14
	References	15
2	Basic Structures of Polymers	17
2.1	Classification Schemes	17
2.2	Bonding	18
2.3	Single Molecules	21
2.4	Networks Molecules	23
2.5	Cohesive Energy Density	23
	Problems	30
	References	32
3	Physical States and Transitions	33
3.1	Physical States	33
3.2	Amorphous Polymers	36
3.3	Plasticization	39
3.4	Crystallinity	40
3.5	Conformation of Single Chains in Crystals	44
3.6	Spherulites and Drawing	45
3.7	Crystallization	49
3.8	Transition Temperatures	50
	Problems	55
	References	57
4	Polymer Formation	59
4.1	Polymerization Reactions	59
4.2	Functionality	60
4.3	Kinetic Schemes	60
4.4	Chain Polymerization	62
4.5	Ionic and Coordination-Complex Polymerizations	72
4.6	Stepwise Polymerization	79

4.7	Ring-Scission Polymerization	84
4.8	Copolymerization	86
4.9	Biosynthesis of Polymers	93
4.10	Polymer Modification	96
	Problems	98
	References	102
5	Polymerization Processes	105
5.1	Design Criteria	105
5.2	Bulk Polymerization	108
5.3	Solution Polymerization	110
5.4	Suspension Polymerization	114
5.5	Emulsion Polymerization	116
5.6	Comparison of Polymerization Methods	121
	Problems	122
	References	124
6	The Molecular Weight of Polymers	127
6.1	Average Molecular Weight	127
6.2	Theoretical Distributions	129
6.3	Empirical Distribution Models	133
6.4	Measurement of Distribution	136
6.5	Measurement of Molecular Weight	142
6.6	Number-Average Molecular Weight Methods	142
6.7	Weight-Average Molecular Weight Methods	146
	Problems	149
	References	152
7	Viscous Flow	155
7.1	Definitions	155
7.2	Polymer Shapes in Solution	157
7.3	Dilute Solutions and Intrinsic Viscosity	162
7.4	Effect of Concentration and Molecular Weight	167
7.5	Effect of Temperature and Pressure	168
7.6	Models for Non-Newtonian Flow	170
7.7	Measurement of Viscosity	177
7.8	Elastic Liquids (Normal Stresses and Melt Fracture)	185
7.9	Turbulent Flow	188
	Problems	191
	References	196

8	Mechanical Properties at Small Deformations	199
8.1	Elasticity in Various Geometries	199
8.2	Rubber Elasticity	201
8.3	Viscoelasticity-Maxwell Model	206
8.4	Dynamic Measurements	213
8.5	Real Polymers – Five Regions of Viscoelasticity	216
8.6	Generalized Maxwell Model	218
8.7	Effect of Molecular Weight	221
8.8	Effect of Crystallinity	222
8.9	Effect of Fillers	222
8.10	Other Transitions	222
	Problems	225
	References	228
9	Ultimate Properties	231
9.1	Failure Tests	231
9.2	Constant-Rate-of-Strain Tests	233
9.3	Breaking Energy	235
9.4	Creep Failure	236
9.5	Fatigue	236
9.6	Reduced-Variable Failure Correlations	237
9.7	Fracture of Glassy Materials	246
9.8	Heterophase Systems	246
	Problems	258
	References	259
10	Some General Properties of Polymers Systems	261
10.1	Design Criteria	261
10.2	Compounding	262
10.3	Hardness	264
10.4	Density	264
10.5	Thermal Properties	266
10.6	Electrical Properties	267
	Problems	273
	References	274
11	Degradation and Stabilization of Polymer Systems	277
11.1	Degrading Agencies	277
11.2	Phase Separation and Interfacial Failure	282
11.3	Polymer Degradation	283
11.4	Antioxidants and Related Compounds	289

11.5 Stabilizers for Irradiates Systems	294
11.6 Ablation	298
11.7 Waste Disposal and Recycling	300
Problems	303
References	303
12 Fabrication Processes	305
12.1 The Fabricator	305
12.2 Raw Material Forms	306
12.3 Mixing	307
12.4 One-Dimensional Processes	312
12.5 Two-Dimensional Processes	330
12.6 Three-Dimensional Processes	348
Problems	376
References	377
13 Carbon Chain Polymer	381
13.1 Introduction	381
13.2 The Polyolefins	382
13.3 The ABS Group	393
13.4 The Diene Polymers	404
13.5 The Vinyls	412
13.6 The Acrylics	417
13.7 The Fluorocarbon Polymers	423
Problems	427
References	427
14 Heterochain Polymers	431
14.1 Polyesters	431
14.2 Polyethers	437
14.3 Polysaccharides	443
14.4 Polyamides and Related Polymers	449
14.5 Aldehyde Condensation Polymers	460
14.6 Polymers Based on Isocyanate Reactions	464
14.7 Silicones	467
14.8 Polyphosphazenes	472
14.9 Engineering Resins and High-Performance Polymers	473
Problems	476
References	477

15 Analysis and Identification of Polymers	481
15.1 The Purpose of Polymer Analysis	481
15.2 Infrared and Ultraviolet Spectroscopy	481
15.3 Differential Thermal Analysis	486
15.4 Nuclear Magnetic Resonance Spectroscopy	488
15.5 Miscellaneous Spectroscopy Methods	489
15.6 Chemical Tests and identification Schemes	490
Problems	490
References	491
Appendixes	
1 List of Symbols	493
2 Harmonic Motion of a Maxwell Model	503
3 A Guide to Literature Sources	507
4 Laboratory Exercises	513
5 Selected Properties of Polymer Systems	531
Name Index	547
Subject Index	557
