

## **668.9 MOR**

### **CONTENTS**

|           |                                                 |           |
|-----------|-------------------------------------------------|-----------|
| <b>1.</b> | <b>The nature and origins of polymers</b>       | <b>1</b>  |
| 1.1       | Introduction                                    | 1         |
| 1.2       | Nature of polymers                              | 2         |
| 1.3       | Basic chemical types                            | 6         |
| 1.4       | Morphology                                      | 12        |
| 1.5       | Physical properties                             | 17        |
| 1.6       | Origins of polymers                             | 22        |
|           | References and Further reading                  | 29        |
| <b>2</b>  | <b>The physical basis of polymer processing</b> | <b>30</b> |
| 2.1       | Introduction                                    | 30        |
| 2.2       | Liquids and viscosity                           | 32        |
| 2.3       | Viscosity and polymer processing                | 34        |
| 2.4       | Other properties of fluids                      | 36        |
| 2.5       | Shear stresses in polymer systems               | 37        |
| 2.6       | Non-Newtonian flow                              | 38        |
| 2.7       | Practical melt viscosities                      | 40        |
| 2.8       | Flow in channels                                | 41        |
| 2.9       | Melt flow index                                 | 44        |
| 2.10      | Melting of polymers                             | 45        |
| 2.11      | Liquid to solid                                 | 47        |
|           | References and Further reading                  | 54        |
| <b>3</b>  | <b>Mixing</b>                                   | <b>55</b> |
| 3.1       | Polymers and additives                          | 55        |
| 3.2       | Physical form of polymer mixes                  | 58        |
| 3.3       | Types of mixing process                         | 59        |
| 3.4       | Some Processes and machines                     | 61        |
| 3.5       | Some relationships in mixing                    | 71        |
|           | Further reading                                 | 73        |
| <b>4</b>  | <b>Contents</b>                                 | <b>74</b> |
| 4.1       | What is extrusion?                              | 74        |
| 4.2       | Features of a single screw extruder             | 74        |
| 4.3       | Flow mechanisms                                 | 82        |
| 4.4       | analysis of flow                                | 84        |

|          |                                           |            |
|----------|-------------------------------------------|------------|
| 4.5      | Some aspects of screw design              | 92         |
| 4.6      | Twin screw extruders                      | 97         |
| 4.7      | Extruder and die characteristics          | 102        |
| 4.8      | The extrusion die                         | 105        |
|          | References and Further reading            | 111        |
| <b>5</b> | <b>Extrusion-based processes</b>          | <b>112</b> |
| 5.1      | Profile extrusion                         | 112        |
| 5.2      | Cross-head extrusion                      | 115        |
| 5.3      | Orientation in pipes and hoses            | 117        |
| 5.4      | Orientation and crystallization           | 117        |
| 5.5      | Tubular blown film                        | 118        |
| 5.6      | Other film and sheet processes            | 121        |
| 5.7      | Synthetic fibres                          | 123        |
| 5.8      | Netting                                   | 124        |
| 5.9      | Co-extrusion                              | 124        |
|          | Reference                                 | 125        |
| <b>6</b> | <b>Blow moulding</b>                      | <b>126</b> |
| 6.1      | Blow moulding principles                  | 126        |
| 6.2      | Extrusion blow moulding                   | 126        |
| 6.3      | Injection blow moulding                   | 133        |
| 6.4      | Why PET and why stretch-blow?             | 136        |
|          | Reference                                 | 137        |
| <b>7</b> | <b>Thermoforming</b>                      | <b>138</b> |
| 7.1      | Principles                                | 138        |
| 7.2      | Vacuum forming                            | 138        |
| 7.3      | Material stress and orientation           | 142        |
| 7.4      | Applications                              | 143        |
| 7.5      | Materials                                 | 144        |
|          | References                                | 145        |
| <b>8</b> | <b>Injection moulding</b>                 | <b>146</b> |
| 8.1      | Principles                                | 146        |
| 8.2      | The moulding cycle                        | 147        |
| 8.3      | The injection moulding machine            | 149        |
| 8.4      | The polypropylene hinge-a study in gating | 156        |
| 8.5      | Some aspects of products quality          | 160        |
| 8.6      | Sprueless moulding                        | 168        |

|           |                                                    |            |
|-----------|----------------------------------------------------|------------|
| 8.7       | Newer developments                                 | 169        |
|           | References                                         | 174        |
|           | Further reading                                    | 175        |
| <b>9</b>  | <b>Compression and transfer moulding</b>           | <b>176</b> |
| 9.1       | Introduction                                       | 176        |
| 9.2       | Thermosetting compounds                            | 176        |
| 9.3       | Compression moulding process                       | 179        |
| 9.4       | Transfer moulding                                  | 183        |
|           | References                                         | 184        |
| <b>10</b> | <b>Polymers in the rubbery state</b>               | <b>185</b> |
| 10.1      | The rubbery state                                  | 185        |
| 10.2      | The calendering process                            | 186        |
