CONTENTS

		Page
Preface		7
Chapter One	Iron, Related Metals, and Impurities	9
Chapter Two	Laws of Physical Chemistry Applied to Steelmaking	27
Chapter Three	Production and Classification of Steels	63
Chapter Four	Slags of Steelmaking Processes	68
Chapter Five	Acid Bessemer Process	81
Chapter Six	Basic Bessemer Process	115
Chapter Seven	Small Bessemer Conversion	161
Chapter Eight	Oxygen Converter Processes	167
Chapter Nine	Treating High-phosphorus Pig irons in Oxygen Converters	216
Chapter Ten	Melt Control, Quality of Steel, and Technico-economical Indices of Oxygen-	
	Converter Process	238
Chapter Eleven	Organization of Work in Oxygen Converter Shops	252
Chapter Twelve	Steelmaking in Open-hearth Furnaces	276
Chapter Thirteen	Essentials of the Open-hearth Process	303
Chapter Fourteen	Modifications of the Basic Open-hearth Process	348
Chapter Fifteen	Acid Open-hearth Process	400
Chapter Sixteen	Open-hearth Conversion of High-chromium Charges	415
Chapter Seventeen	modernization of Open-hearth Steelmaking	429
Chapter Eighteen	Deoxidation and Alloying of Steel	438
Chapter Nineteen	Gases in Liquid Steel and Variations of Their Content During Melting and	
	Teeming	477
