

## CONTENTS

	Page
Foreword	15
Preface	17
Units and Conversion Factors	21
Symbols and Abbreviations	23
 Chapter 1 – Historical developments	 27
1.1 Pre-cyanidation	27
1.2 100 Years of cyanidation	34
1.3 1972-1990 : Era of technical development	38
1.4 Towards the 21 <sup>st</sup> century	42
References	43
 Chapter 2 – Ore deposits and process mineralogy	 45
2.1 Gold Minerals	45
2.2 Classification of gold-bearing materials	53
2.3 Placers	53
2.4 Free Milling ores	57
2.5 Oxidized ores	65
2.6 Silver-rich ores	67
2.7 Iron sulphides	70
2.8 Arsenic sulphides	73
2.9 Copper sulphides	74
2.10 Antimony sulphides	75
2.11 Tellurides	75
2.12 Carbonaceous ores	76
2.13 Gravity concentrates	77
2.14 Flotation concentrates	77
2.15 Tailings	78
2.16 Refinery materials	82
2.17 Recycled gold	83
2.18 Determinative methods	84
References	92
 Chapter 3 – Process selection	 96
3.1 Factors affecting process selection	96
3.2 Unit process options	105
3.3 Flowsheet options	116
3.4 Cost considerations	132
References	134
 Chapter 4 – Principles of gold hydrometallurgy	 136
4.1 Reaction chemistry of gold	137
4.2 Chemical equilibria	139
4.3 Reaction kinetics	159
4.4 Experimental methods	174
References	174
 Chapter 5 – Oxidative pretreatment	 176
5.1 Hydrometallurgical sulphide oxidation	178
5.2 Oxygen – Low pressure oxidation	191
5.3 Oxygen – high pressure acidic oxidation	193

5.4	Oxygen – high pressure non-acidic oxidation	204
5.5	Nitric acid oxidation	207
5.6	Chlorine oxidation	215
5.7	Biological oxidation	221
5.8	Pyrometallurgical oxidation	234
	References	254
Chapter 6 – Leaching		259
6.1	Cyanidation	260
6.2	Chlorination	295
6.3	Thiourea	299
6.4	Thiocyanate	302
6.5	Thiosulphate	303
6.6	Other lixivants	304
	References	305
Chapter 7 – Solution purification and concentration		309
7.1	Carbon adsorption	309
7.2	Ion exchange resins	351
7.3	Solvent extraction	368
	References	374
Chapter 8 – Recovery		370
8.1	Zinc Precipitation	380
8.2	Aluminium precipitation	402
8.3	Electrowinning	403
8.4	Recovery from non-cyanide solutions	418
	References	419
Chapter 9 – Surface chemical methods		423
9.1	Principles of surface chemistry	423
9.2	Flotation	435
9.3	Amalgamation	451
9.4	Coal gold agglomeration	455
	References	455
Chapter 10 – Refining		458
10.1	Pyrometallurgy of gold	458
10.2	Acid leaching	460
10.3	Pyrometallurgical methods for crude bullion production	463
10.4	Bullion refining	470
	References	474
Chapter 11 – Effluent treatment		476
11.1	Types of waste and effluent control parameters	476
11.2	Reagent and metals recovery	482
11.3	Detoxification	488
	References	505
Chapter 12 – Industrial applications		508
12.1	Distribution of process technology	508
12.2	Industrial process flowsheets	513
	References	566
Index		569
