CHAPTER 1 – ZIRCONIUM AND ITS APPLICATION TO NUCLEAR REACTORS	1
1. History	1
2. Application of Zirconium to Nuclear Reactors	5
3. Nuclear Reactors	6
4. Nuclear Properties of Zirconium	12
5. Other Properties of Zirconium	15
6. Desirable Nonnuclear Properties of Zirconium	15
7. Use of Zirconium in Reactors	16
CHAPTER 2 – APPLICATION OF ZIRCONIUM FOR OTHER USES	19
1. Introduction	19
2. Chemical Equipment	20
3. Electric and Electronic uses	26
4. Use of Zirconium as an Alloying Addition	31
5. Zirconium Compounds	41
6. Miscellaneous uses	43
CHAPTER 3 – OCCURRENCE OF ZIRCONIUM	50
1. Geographic location of Deposits	50
2. Estimate of Reserves	53
3. Future Requirements	54
4. Hafnium Contents of Various Materials	55
5. Mining and Ore-dressing Methods	55
6. Ore Produced in Past Years	57
CHAPTER 4 – ZIRCONIUM PRODUCTION METHODS	59
I Thermodynamic Properties of Zirconium Compounds	
1. Introduction	59
2. Zirconium and Hafnium Dioxides	60
3. Zirconium and Hafnium Carbides	61
4. Zirconium and Hafnium Nitrides	61
5. Zirconium Silicate	62
6. Zirconium and Hafnium Halides	62
7. Phosphorous Oxychloride Complexes of Zirconium and Hafnium Tetrachlorides	64
8. Compounds of Interest in Zirconium-reduction Processes	65
II Kroll Process	
9. History	66
10. Theory of the Reduction Process	69
11. Production Techniques	72
12. Future Developments	99
III Other Processes	
13. Reduction of Zirconium Tetrachloride with Sodium, Calcium, or Magnesium	101
14. Reduction of the Fluoride with Calcium or Magnesium	102
15. Reduction of Alkali Fluozirconate with Sodium or Aluminum	105
16. Reduction of Zirconium Oxide with Calcium, Magnesium, or Aluminum	105
17. Reduction of Zirconium Oxide with Carbon or Zirconium Carbide	107
18. Fusion Electrolysis of Chloride or Fluoride Baths	108
19. Electrolysis of Aqueous and Organic Solutions	113

	IV Hafnium Removal	
20.	Discovery and History	113
21.	General Chemistry	114
22.	Methods of Separation	115
CHAPTER 5 – IODIDE-DECOMPOSITION PROCESS FOR PRODUCTION OF ZIRCONIUM		135
1.	Introduction	135
2.	History	136
3.	The Deposition Process	138
4.	Corrosion of Materials in an Iodine Atmosphere	141
5.	Design of Metal Deposition Vessel	143
6.	Method of Filament Attachment	146
7.	Auxiliary Equipment	151
8.	Method of Addition of Iodine or Zirconium Iodide	159
9.	Experimental Results	160
10.	Practical Production Methods	196
11.	Disadvantages of the Iodide Process and Possible Future Improvements	204
CHAPTER 6 – MELTING AND SHAPING OF ZIRCONIUM AND ITS ALLOYS		216
	I Melting of Zirconium	
1.	Historical Background	216
2.	Arc Melting	217
3.	Induction Melting	235
4.	Resistance Melting	240
5.	Drip Melting	245
6.	Autocrucible Melting	247
7.	Potential Melting Techniques	249
8.	Recovery of Scrap	255
	II Fabrication of Zirconium	
9.	Early Small-Scale Fabrication Methods	259
10.	General Fabricating Characteristics	259
11.	Heating for Hot Working	260
12.	Ingot Fabrication	261
13.	Hot Rolling	262
14.	Cold Rolling	263
15.	Extrusion	264
16.	Swaging	271
17.	Rod and Wire Drawing	272
18.	Deep Drawing and Cupping	273
19.	Tube Fabrication	274
20.	Annealing of Zirconium	278
	III Powder Metallurgy of Zirconium	
21.	Introduction	280
22.	Leaching Zirconium Sponge	281
23.	Kinetics of the Reaction of Hydrogen with Zirconium	283
24.	Powder Preparation	284
25.	Compacting of Zirconium and Zirconium Hydride Powders	289
26.	Sintering of Zirconium and Zirconium Hydride	290
27.	Hot Pressing of Zirconium Powder	292
28.	Properties of Sintered Zirconium	292
29.	Preparation of Zirconium Alloys by Powder Metallurgy	296
CHAPTER 7 - JOINING AND FINISHING OF ZIRCONIUM		307
	I Joining	
1.	Arc Welding	307
2.	Resistance Welding	320
3.	Solid-Phase Welding	322
4.	Brazing	325

	II Finishing	
5.	Machining	326
6.	Grinding	331
7.	Surface Treatment and Cleaning	334
8.	Plating	337
CHAPTER 8 – PHYSICAL METALLURGY OF ZIRCONIUM AND ITS ALLOYS		348
1.	Introduction	348
2.	Thermal Properties	249
3.	Electrical Properties	364
4.	Elastic Properties	374
5.	Crystal Structure and Crystallography of Transformation	375
6.	Deformation, Recrystallization, and Preferred Orientation	382
7.	Transformation Mechanism and Heat-treatment	412
8.	Diffusion	418
9.	Magnetic, Optical, and Thermionic Properties	423
CHAPTER 9 – ZIRCONIUM ALLOY SYSTEMS		432
1.	Introduction	432
2.	Theoretical Survey	432
3.	Purity of Alloys	438
4.	Methods	439
5.	Types of Diagrams	442
6.	Zirconium Equilibrium Diagrams	443
CHAPTER 10 – MECHANICAL PROPERTIES OF ZIRCONIUM AND ITS ALLOYS		490
1.	Introduction	490
2.	Tensile Properties	491
3.	Impact Properties	519
4.	Creep Properties	526
5.	Fatigue Properties	530
6.	Hardness and Hardness Scales	537
7.	Properties Related to Hot Fabrication	546
CHAPTER 11 – CORROSION OF ZIRCONIUM AND ITS ALLOYS		553
	I Gas- Metal Reactions of Zirconium	
1.	Introduction	555
2.	Structure of Zirconium and Types of Interstitial Structures	556
3.	Crystallography and Composition of the Phases Formed	556
4.	Thermodynamic Relations in Gas Reactions of Zirconium	578
5.	Kinetics of External Film Formation on Zirconium and Zirconium Alloys	581
6.	Kinetics of Solution and Diffusion	600
	II Corrosion in Water and Steam	
7.	Introduction	608
	III Corrosion in Acids, Bases, and Salts	
8.	Early Investigations	640
9.	High-hafnium Induction-melted Zirconium	641
10.	Effect of Zirconium Purity on Corrosion Resistance	648
11.	The Corrosion Resistance of Zirconium Alloys	652
12.	Tabulation of Corrosion Properties	654
13.	Corrosion in Fused Salts	654
	IV Corrosion of Zirconium and Its Alloys in Liquid Metals	
14.	Introduction	657
15.	Results of Corrosion Tests	659
	V Electrode Reactions of Zirconium Metal	
16.	Introduction	663
17.	General Mechanism of the Anodic Process on Zirconium	663

18.	Effect of Electrolytes on the Behavior of Zirconium	665
19.	Cathodic Reactions	676
CHAPTER 12 - ANALYTICAL CHEMISTRY OF ZIRCONIUM		687
1.	Introduction	687
2.	Problems Associated with Analysis of Zirconium-base Metals	687
3.	Problems Associated with Chemical analysis of Zirconium	689
4.	Separation of Zirconium	689
5.	Chemical Analysis for Impurities in Zirconium Metal	690
6.	Zirconium Alloys	699
7.	Spectrographic Analysis of Zirconium Metal	699
8.	Pile-activation Techniques	703
APPENDIX A – METALLOGRAPHY OF ZIRCONIUM		709
1.	General History of Metallographic Procedures	709
2.	Sample Preparation	710
3.	Alloying Elements and Impurity Particles	716
4.	Photography	725
5.	Use of Polarized Light for Zirconium Metallography	727
6.	Electron Metallography of Zirconium	728
APPENDIX B – INDUSTRIAL HYGIENE AND SAFETY		733
1.	Introduction	733
2.	Explosion Hazard	733
3.	Fire Control	737
4.	Shipment	737
5.	Toxicity	738
6.	Miscellaneous	738
APPENDIX C – ENGINEERING DATA SHEETS		742
	Zircaloy-2	742
	Arc-melted Iodide Zirconium	743
APPENDIX D – GLOSSARY		744
APPENDIX E – CONTRIBUTING AUTHORS		746
NAME INDEX		749
SUBJECT INDEX		755
