

Contents

Chapter 1 The Nature of Metals	9
The Crystalline Structure of Solids	10
The Structure of Atoms	13
Electron Quantum States	15
The Ionic Bond	20
The Covalent Bond	21
The Metallic Bond	23
Chapter 2 Crystals, Dislocations, and Alloys	31
Sources of Dislocations	34
Effect of Dislocations	35
Deformation and Fracture	38
Fatigue and Creep	42
Alloying	46
Carbon-Steel Alloys	48
Age Hardening	53
Chapter 3 The Extraction of Metals	57
Cleaning and Roasting the Ore	59
Ore Reduction Techniques	63
Stability of Metallic Compounds	64
Refining Techniques	71
Which Extraction Process?	77
Economics of Metal Extraction	78
Chapter 4 The Shaping of Metals	81
Methods	81
Choosing the Shaping Method	83
Effects on Microstructure	89
Influence of Size and Shape on Processing	91
Accuracy Requirements	93
Chapter 5 Metals for the Modern World	97
The Strengthening of Metals	98
Precipitation Hardening	98
Alloys to Work at High Temperatures	102
Fiber Reinforcement	105

Chapter 6 New Ways of Fabricating Metals	117
Shaping Under Pressure	118
Shaping at Ultrahigh Speed	121
Explosive Forming	122
Hydroelectric Forming	128
Electromagnetic Forming	128
Pneumatic-mechanical Forming	131
New Machining Techniques	132
Chemical Machining	133
Electron-beam Machining	134
Electrochemical Machining	135
Spark Machining	137
Electron-beam Welding	139
Laser Techniques	143
Chapter 7 Automation in the Metallurgical Industry	147
The Possibilities of Automation	148
In the Blast Furnace	149
In the Rolling Mill	155
In Combined Processes	159
Chapter 8 Modern Ways of Examining Metals	163
The Range of Techniques	164
The Metallurgical Microscope	166
Von Laue's Crucial Experiment	167
X-ray Diffraction	168
The Production of X-rays	173
Analysis from Characteristic Wavelengths	176
The X-ray Fluorescent Spectrometer	177
The Electron Microscope	178
The Electron-beam Scanning Microanalyser	182
Ionization Techniques	182
The Optical Spectroscope	186
The Mass Spectrograph	186
The Field-Ion Microscope	186
