1.	HISTORICAL DEVELOPMENT AND TECHNICAL/ ECONOMIC SIGNIFICANCE OF THE PROCESS	17
2.	PHOSPHORIC ACID PICKLING BATHS	25
2.1	Formation of Rust and Scale on Steel	26
2.2	Basic Principles of Pickling of Steel	27
2.2.1	Dissolution of Scale and Rust	27
2.2.2	Dissolution of Iron	30
2.3	Pickling with Phosphoric Acid	33
2.3.1	Pickling in Non-inhibited Phosphoric Acid	37
2.3.2	Pickling in Inhibited Phosphoric Acid	37
2.3.2.1	Theory and practice in use of pickling inhibitors	37
2.3.2.2	Requirements of pickling inhibitors	38
2.3.2.3	Techniques for the testing and study of inhibitors	39
2.3.2.4	Pickling inhibitors for phosphoric acid baths	40
2.3.3	Pickling and Degreasing in Inhibited Phosphoric Acid	42
2.4	Phosphoric Acid Pickling of Different Metals	44
2.5	Implementation of the Pickling Process	44
3.	PHOSPHATING PROCESSES	47
3.1	Phosphate Coating Processes	47
3.1.1	Solution Equilibria	48
3.1.2	Kinetics of Coating Formation	57

3.1.2.1	The pickling reaction	58
3.1.2.2	Nucleation and crystal growth	64
3.1.2.3	Electrochemical theory of coating formation	92
3.1.3	The Coating and its Properties	94
3.1.3.1	Structure and composition of the phosphate coating	94
3.1.3.2	Adhesion of the coating to metallic substrates	103
3.1.3.3	Physical properties of the coating	105
3.1.3.4	Chemical properties of the coating	106
3.1.4	Effects of Phosphate Coatings on the Properties of the Metal Substrate	110
3.1.5	Phosphating Processes	113
3.2	'Non-Coating' Phosphate Processes	120
3.2.1	Kinetics of Coating Formation	120
3.2.2	Composition of Alkali Phosphate Baths	124
3.2.3	The Coating and its Properties	126
3.2.3.1	Formation and composition of the coating	126
3.2.3.2	Physical and chemical properties of the coating	129
3.2.4	Processes for 'Non-coating' Phosphating	130
3.3	Phosphating in Non-aqueous Media	130
3.3.1	Corrosion Processes in Non-aqueous Media	130
3.3.2	Systems Based on Halogenated Hydrocarbons	131
3.3.3	Systems Based on Halogen-free Solvents	131
3.3.4	Phosphating Reaction Lubricants	131
3.3.5	Wash Primers	132
3.3.6	Phosphoric Acid Containing Post-treatment Compounds	133
3.4	Phosphating Followed by Heat Treatment	133

4 TECHNICAL APPLICATIONS OF PHOSPHATING 137

4.1	General Comments on the Process	137
4.2	Corrosion Protection with no Subsequent Treatment	138
4.3	Corrosion Protection with Additional Post-treatment	140
4.3.1	Post-treatment with Inorganic Compounds	141
4.3.2	Post-treatment with Oils and Waxes	142
4.3.2.1	General comments on post-treatment with oils and waxes	142
4.3.2.2	Synergistic effects of phosphate coatings and corrosion protective oils	144
4.3.2.3	Practical applications of oil or wax-treated phosphate coatings	145

4.3.3	Post-treatment with Specialised Paints	146
4.3.4	Technical Implementation of Phosphating for Corrosion Protection with or without Post-treatment	147
4.4	Phosphating as a Base for Paint or Organic Coatings	149
4.4.1	Pretreatments for Liquid Paint Application	149
4.4.1.1	General comments	149
4.4.1.2	Synergistic effects of phosphate coating and paint films	151
4.4.1.3	Practical applications	154
4.4.2	Pretreatments for Electrocoating	155
4.4.2.1	General comments on electrocoating	156
4.4.2.2	Physico-chemical reactions in anodic electrocoating	156
4.4.2.3	Synergistic effects of phosphating and anodic electrocoating	157
4.4.2.4	Practical applications of anodic electrocoating	167
4.4.2.5	General comments on cathodic electrocoating	167
4.4.2.6	Physico-chemical reactions taking place in cathodic electrocoating	168
4.4.2.7	Synergistic effects of phosphate coatings with cathodic electrocoating	169
4.4.2.8	Practical applications in conjunction with cathodic electrocoating	176
4.4.3	Technical Aspects of Phosphating for Conventional Painting or Electrocoating	176
4.4.3.1	Spray processes	176
4.4.3.2	Immersion processes	179
4.4.3.3	High-pressure spraying	180
4.4.3.4	Phosphating of motor vehicle bodies prior to painting	180
4.4.4	Pretreatment for Powder-coating	181
4.4.4.1	General comments on powder-coating	181
4.4.4.2	Synergistic effects between surface pretreatment and powder-coating	183
4.4.4.3	Practical applications	191
4.4.5	Sheet Steel as a Paint Substrate	191
4.4.5.1	Manufacture of cold-rolled steel strip	192
4.4.5.2	Variations in the corrosion resistance of phosphated and painted cold-rolled steel	194
4.4.6	Pre-coated Steel Sheet as a Substrate for Painting	198
4.4.7	Basis Metal for Coil Coating	200
4.4.7.1	Phosphating	200
4.4.7.2	Organic coating materials	205
4.4.7.3	Practical aspects of continuous strip coating	206
4.4.7.4	Applications of coated strip	210
4.5	Phosphating to Facilitate Cold Forming of Metals	211
4.5.1	General Overview	211

4.5.1.1	Effect of friction in cold forming	212
4.5.1.2	Synergistic effects of lubricants and phosphate coatings	212
4.5.1.3	Adhesion and deformability of phosphate coatings	214
4.5.1.4	Phosphating processes for cold deformation of metals	216
4.5.1.5	Effect of the phosphate coating on the formed work	220
4.5.1.6	Surface treatment after cold-forming	220
4.5.2	Drawing of Wire and other Profiles	222
4.5.2.1	General	222
4.5.2.2	Starting materials	223
4.5.2.3	Machinery and equipment	226
4.5.2.4	Tools	227
4.5.2.5	Phosphating	228
4.5.2.6	Implementation of the phosphating process	230
4.5.2.7	Lubricants	231
4.5.2.8	Example of the process sequence	233
4.5.3	Drawing of Tubes and Hollow Sections	233
4.5.3.1	General	233
4.5.3.2	Starting materials	234
4.5.3.3	Drawing processes	234
4.5.3.4	Drawing machinery	236
4.5.3.5	Tools	237
4.5.3.6	Phosphating	238
4.5.3.7	Implementation of the phosphating process	240
4.5.3.8	Lubricants	240
4.5.3.9	Examples of applications	241
4.5.3.10	Post-treatment of drawn tubing	242
4.5.4	Cold Extrusion	242
4.5.4.1	General	242
4.5.4.2	Starting materials	243
4.5.4.3	Machinery	244
4.5.4.4	Tools	245
4.5.4.5	Phosphating	245
4.5.4.6	Implementation of the phosphating process	246
4.5.4.7	Lubricants	247
4.5.4.8	Examples of the manufacture of finished products	248
4.5.5	Deep Drawing	250
4.5.5.1	General	250
4.5.5.2	Machinery and tools	252
4.5.5.3	Steel sheet for drawing and deep drawing	253
4.5.5.4	Phosphating	254
4.5.5.5	Lubricants	256
4.5.5.6	Examples of applications	257
4.6	Improvement of Sliding Properties	258
4.7	Electrical Insulation	260

5.	PHOSPHATING PLANT	265
5.1	Process Units	265
5.1.1	Tanks for Treatment Solutions	265
5.1.1.1	Tanks for immersion phosphating	265
5.1.1.2	Tanks for spray phosphating	269
5.1.2	Bath Heating	269
5.1.3	Mechanical Handling Equipment	274
5.1.4	Spray Equipment	276
5.1.5	Liquid Dosing Installations	277
5.1.6	Drying	278
5.1.7	Sludge Removal	278
5.1.8	Storage, Transport and Dosing of Chemicals	279
5.1.9	Materials for Plant Construction	281
5.1.10	Process Feed Water, Rinse Tanks and Water Supply	281
5.2	Treatment Plants	282
5.2.1	Immersion Plants for Individual Components	282
5.2.2	Spray Plants for Individual Components	288
5.2.3	Conveyor-type Plants	288
5.2.4	Plants for Continuous Treatment of Wire	288
5.2.5	Steam and High-pressure Treatment	288
5.2.6	Manual and Special Application Plant	293
5.2.7	Plant Maintenance	293
6.	TREATMENT OF EFFLUENTS FROM PHOSPHATING PLANTS	294
6.1	Legal Requirements	294
6.1.1	Federal Republic of Germany	294
6.1.2	United Kingdom	296
6.1.3	United States of America	296
6.2	General Overview of Effluent Materials	298
6.3	Effluent Management	299
6.4	Effluent Treatment Methods	299
6.4.1	Neutralisation	299
6.4.2	Chromate Removal	301
6.4.3	Nitrite Removal	301
6.4.4	Rinsewater Recycling using Ion-exchangers	302

6.4.5	Emulsion Breaking	302
6.4.6	Thickening of Effluent Sludges	303
6.5	Effluent Treatment Plants	305
6.5.1	Batch Treatment	305
6.5.2	Continuous Treatment	305
6.6	Zinc Phosphating Plants with Closed Loop Operation	306
6.7	Effluent Monitoring and Analytical Control	307

7. TECHNIQUES FOR THE CHARACTERISATION OF PHOSPHATE COATINGS **308**

7.1	Determination of Coating Weight	309
7.1.1	Coating Weight Determination by Strip and Weigh Method	309
7.1.2	Coating Weight Determination by Stripping without Weighing	309
7.1.3	Coating Weight Determination of Post-treated Phosphate Coatings	311
7.1.4	Coating Weight Determination using Infra-red Absorption	312
7.2	Estimation of Metal Removal during Etching	313
7.3	Coating Thickness Measurement	313
7.3.1	Destructive Thickness Measuring Methods	314
7.3.2	Non-destructive Thickness Measuring Methods	314
7.4	Relationship between Coating Thickness and Coating Weight	316
7.5	Determination of Porosity and Pore Distribution	316
7.6	Determination of Surface Roughness	318
7.7	Determination of Crystal Size	320
7.8	Determination of the Phase Structure	320
7.9	Determination of Electrical Properties	322
7.10	Analysis and Identification of Phosphate Coatings on Metals	323
7.10.1	Determination of Phosphate	325
7.10.2	Determination of Manganese	325
7.10.3	Determination of Zinc	325
7.10.4	Determination of Calcium	325

7.11	Determination of Carbon in the Surface of Steel	326
8.	ANALYTICAL CONTROL OF PROCESS CHEMICALS	327
8.1	Determination of Free Acid	328
8.2	Determination of Total Phosphate	330
8.3	Determination of Total Acid or Pointage	332
8.4	Determination of Acidity Ratio	333
8.5	Point of Incipient Precipitation (PIP)	334
8.6	Other Analytical Methods	334
8.7	Automatic Process Control	337
8.8	Concentrate Testing	343
9.	TECHNICAL ASSESSMENT OF PHOSPHATE COATINGS	344
9.1	Tests for Corrosion Protection	344
9.1.1	Manifestations of Corrosion	344
9.1.2	Test Methods for Corrosion Protection	347
9.1.2.1	Long-term tests	348
9.1.2.2	Salt spray test	348
9.1.2.3	Water condensate test	349
9.1.2.4	Water condensate test in sulphur dioxide atmosphere	349
9.1.2.5	Tests for filiform corrosion	349
9.1.2.6	Detergent test	350
9.1.2.7	Testing under cyclic conditions	350
9.1.2.8	Corrosion testing of assembled vehicles	350
9.1.2.9	Miscellaneous short-term and electrochemical tests	350
9.2	Adhesion Testing	351
9.2.1	Mandrel Bend Test	351
9.2.2	Cross-hatch Test	352
9.2.3	Erichsen Test	352
9.2.4	Impact Tests	352
9.2.5	Cup Drawing Test	353
9.2.6	T-bend Test	353
9.2.7	Stone Chipping Test	353

9.3	Combined Adhesion and Corrosion Tests	354
9.4	Testing Surface Friction Properties	354
9.5	Testing Electrical Insulation Properties	354
