

CONTENTS

1.	INTRODUCTION	1
1.1	New Wood Chemistry	1
1.2	Raw Material Supply for Wood Chemistry	2
1.3	Present Status in the World	3
1.3.1	U.S.A. and Canada	4
1.3.2	Sweden	5
1.3.3	Germany, Switzerland and Austria	6
1.3.4	France and Italy	7
1.3.5	Soviet Union	7
1.3.6	FAO	8
1.3.7	FAO Tokyo Meeting on Wood Hydrolysis	9
1.4	The Present Status in Japan	10
1.5	Future of Wood Chemistry	11
2.	WOOD HYDROLYSIS	15
2.1	History	15
2.2	Wood Hydrolysis	17
2.2.1	Hydrolysis of Hemicellulose	17
2.2.2	Hydrolysis of Cellulose	18
2.3	Dilute Sulfuric Acid Process	25
2.3.1	Scholler Process	25
2.3.2	Modifications of the Scholler Process	29
2.4	Concentrated Sulfuric Acid Process	30
2.4.1	Hokkaido Process	31
2.4.2	Nippon Mokuzai Kagaku Process	34
2.4.3	Other Processes	34
2.5	Concentrated Hydrochloric Acid Process	34
2.5.1	Bergius-Rheinau Process	36
2.5.2	Udic-Rheinau Process	38
2.6	Hydrogen Chloride Gas Process	41
2.6.1	Prodor Process	42
2.6.2	Héreng Process	43
2.6.3	Noguchi Institute-Shin Nippon Chisso Process	44
3.	ENGINEERING DISCUSSION OF THE SACCHARIFICATION PROCESS	49
3.1	Prehydrolysis	49
3.2	Main Hydrolysis	51
3.2.1	Problems in the Sulfuric Acid Process	52
3.2.2	Problems in the Hydrochloric Acid Process	54
3.2.3	Problems of Stickiness	55
3.3	Post Hydrolysis	57

3.4	Removal of Exothermic Heat	58
3.5	Recovery of Sulfuric Acid	58
3.5.1	Gypsum Process	59
3.5.2	Process Producing by-products with Sulfuric Acid	59
3.5.3	Diffusion-Dialysis Method	60
3.6	Recovery of Hydrochloric Acid	63
3.7	Purification of Sugar Solutions	67
3.7.1	Removal of Inorganic Substances	69
3.7.2	Removal of Organic Substances	70
3.7.3	Ion Exchange Resin Method	70
3.7.4	Ion Exchange Membrane Method	71
3.7.5	Liquid Ion Exchangers	74
4.	HEXOSES AND THEIR DERIVATIVES	79
4.1	Crystalline Glucose	79
4.2	Fructose	81
4.2.1	Chemical Method	81
4.2.2	Enzymatic Method	82
4.3	Polyalcohols	82
4.3.1	Electrolytic Reduction	82
4.3.2	High Pressure Hydrogenation	83
4.3.3	Sorbitol	84
4.4	Methylglucoside	84
4.5	Hydroxymethylfurfural	85
5.	PENTOSES AND THEIR DERIVATIVES	88
5.1	Crystalline Xylose	88
5.2	Xylitol	89
5.3	Furfural	89
5.3.1	Processes for Furfural Production	89
5.3.2	Engineering Discussions of Furfural Manufacture	97
5.3.3	Utilization of Furfural	109
6.	LIGNIN	120
6.1	Physical Properties and Chemical Composition	121
6.1.1	Isolation of Lignin	121
6.1.2	Physical Properties	122
6.1.3	Chemical Composition	122
6.2	Chemical Structure of Lignin	122
6.2.1	Nuclei and Side Chains	123
6.2.2	Bonds Between Structural Units	123
6.3	Chemical Reactions of Lignin	123
6.3.1	Sulfonation and Sulfurization	125
6.3.2	Reactions with Halogen	125
6.3.3	Thermal Decomposition	126
6.3.4	Oxidation	127

6.3.5	Destructive Hydrogenation	130
6.3.6	Alkaline Decomposition	136
6.3.7	Biogenolysis	137
6.3.8	Other Chemical Reactions	137
6.4	Industrial Utilization of Lignin	138
6.4.1	Physical Utilization of Lignin	140
6.4.2	Vanillin	141
6.4.3	Dimethylsulfide and Its Derivatives	147
6.4.4	Commercial Utilization of Decomposition Products	150
6.4.5	Prospects for Commercial Utilization of Lignin	153
