**PART ONE
INTRODUCTION**

1. DEFINITION AND NOMENCLATURE

K. V. Sarkany and C. H. Ludwig

I.	Introduction	1
II.	Criteria for the Presence of Lignin in Plant Tissues	6
III.	Nomenclature in Lignin Chemistry	10
	A. Ambiguities in the Term Lignin	10
	B. Notation for Carbon Atoms in Phenylpropane Units	11
	C. Inconsistencies in Compound Names	12
	D. Abbreviated Names and Structural Formulae	14
	References	17

**PART TWO
LIGNINS IN THE PLANT KINGDOM**

2. OCCURRENCE AND FORMATION IN PLANTS

A. B. Wardrop

I.	The Occurrence of Lignin in Plants	19
II.	The Texture and Organization of the Cell Wall in Fibres and Tracheids	22
III.	Cell Wall Organization	23
IV.	Lignification	25

V.	Biochemical Aspects of Lignification	28
VI.	Physiological Aspects of Lignification	33
VII.	The Influence of Lignification on Cell Wall Properties	36
VII.	Summary	38
	References	38
3. CLASSIFICATION AND DISTRIBUTION		
K. V. Sarkany and H. L. Hergert		
I.	Major Classes of Lignins	43
II.	Guaiacyl Lignins	44
A.	Lignins in Conifer Woods	44
	1. Gross Distribution; 2. Variation of Lignin Content within Growth Rings; 3. Distribution of Lignin in the Cell Wall of Conifer Tracheids and Parenchyma; 4. Compositional Variation in Normal Conifer Lignins; 5. Compression Wood Lignins; 6. Tissue Culture Lignins	
B.	Cycad Lignins	61
C.	Lignins in Vascular Cryptogams	61
D.	General Characteristics of Guaiacyl Lignins	63
III.	Guaiacyl-Syringyl Lignins	63
A.	Exceptional Conifers	63
B.	Angiosperm Wood Lignins	65
	1. Distribution; 2. Distribution in Single Cells; 3. Relative Amounts of Guaiacyl- and Syringylpropane Units in Hardwood Lignins; 4. Within-Tree Variation in Hardwood Lignins.	
C.	Lignins in Herbaceous Dicotyledons	74
D.	Lignins in Monocotyledons	74
	1. Lignin Contents of Mature Plants; 2. Chemical Composition; 3. Changes During Maturation.	
E.	Guaiacyl-Syringyl Lignins in Cryptogams	79
IV.	The Problem of First Appearance of Lignins in the Plant Kingdom	79
V.	Lignins and Phenolic Polymers in Tree Barks	81
A.	Histological Evidence for Lignin in Bark	82
B.	Bark Phenolic Acids	83
C.	Bark Lignin	85
D.	Proximate Analysis of Bark Lignin	88
	References	89

PART THREE
DEHYDROGENATIVE POLYMERIZATION AND STRUCTURE
OF LIGNINS

4. PRECURSORS AND THEIR POLYMERIZATION

K. V. Sarkanyen

I.	Biogenesis of Lignin Precursors	95
A.	Application of Tracer Methods	95
B.	Shikimic Acid Pathway in Higher Plants	97
C.	Shikimic Acid Pathway in Lignin Formation	99
D.	Conversion of Phenylalanine and Tyrosine to Lignin	104
E.	Conversion of Cinnamic Acid Intermediates to Lignins	105
F.	The Role of Precursor Glucosides	109
G.	Enzymatic Aspects of Polymerization to Lignin	111
H.	Lignification in Maturing Plants	112
II.	Dehydrogenative Polymerization to Lignin	116
A.	Introduction	116
B.	Oxidative Coupling of Simple Phenols	117
C.	Dehydrogenation of 2,4,6-Trisubstituted Phenols	120
D.	Displacement Reactions	122
E.	Coupling Reactions at Unsubstituted Sites of Phenoxyradicals	125
F.	Dehydrogenation of p-Propenylphenol Derivatives	132
G.	Dehydrogenations of Coniferyl and Sinapyl Alcohols	138
H.	Cross-Couplings Between Mono- and Dilignols	145
I.	Coupling Reactions of Di- and Oligolignols	148
J.	Structural Variance in Dehydrogenation Polymers	150
References		155

5. ISOLATION AND STRUCTURAL STUDIES

Y. Z. Lai and K. V. Sarkanyen

I.	Introduction	165
II.	Milled Wood Lignins	166
A.	Method of Preparation	166
B.	Physical and Chemical Changes during the Milling Process	170
III.	Brauns Lignins and "Enzymically Liberated Lignins"	175
A.	Characteristics of Brauns Lignins	175
B.	"Enzymically Liberated Lignins"	179
C.	The Possible Nature of Brauns and Enzymically Liberated Lignins	179
IV.	Periodate Lignins	181

V.	Isolation Methods Based on Acidic Hydrolysis of Polysaccharides	182
A.	Condensation Reactions Caused by Mineral Acids	182
B.	Lignin Isolated by Means of Mineral Acids	185
C.	Cuoxam Lignins	186
D.	Dioxane Acidolysis Lignins	187
VI.	Alkali Lignins	188
VII.	Lignin Thioglycolic Acids	189
VIII.	Limitations of Lignin Preparations	189
IX.	Quantitative Determination of Lignin	190
A.	Applicability of Klason Lignin Method to Wood Samples	190
B.	Lignins in Bark Tissues	193
C.	Herbaceous Plants Including Grasses	193
D.	Lignin in Pulps	194
X.	Structure of Lignins	195
A.	End Groups with Unattached Side-Chains	195
B.	Units with Free Phenolic Hydroxyl Groups	201
C.	β -O-4 Lignol (Arylglycerol- β -Ether) Structures	205
D.	β -1 Lignol Structures	208
E.	4-0-1 and 5-1 Linked Structures	211
F.	β -5 Lignol Structures	211
G.	β - β Lignol Structures	213
H.	5-5 and 5-0-4 Lignol Structures	216
I.	Minor Linkage Types in Conifer Lignins	217
J.	Possible Covalent Bonds Between Lignin and Polysaccharides	218
K.	Isolated Lignin-Carbohydrate Complexes	220
L.	Structural Implications of Compositions and Functional Group Analysis of Milled Wood Lignins	224
M.	Relationship Between Lignins and Extractives	228
	References	230

PART FOUR SPECTROSCOPIC CHARACTERIZATION OF LIGNINS

6. ULTRAVIOLET SPECTRA

Otto Goldschmid

I.	Introduction	241
II.	Origin of Ultraviolet Absorption Spectra of Aromatic Compounds	241
III.	Ultraviolet Spectra of Lignins	245
A.	Effect of Constituent Groups	246
	1. Phenolic Hydroxyl Groups; 2. Carbonyl Groups; 3. α - β Double Bonds; 4. Biphenyl Groups; 5. Summary.	

B. Effect of Species	256
IV. Spectrophotometric Lignin Determinations	258
A. Determination in Wood Cellulose	258
B. Determination in Pulping Liquor	260
C. Determination in Receiving Waters	262
References	263
7. INFRARED SPECTRA	
Herbert L. Hergert	
I. Introduction	267
II. Methods of Measurement	268
A. Effect of State upon Spectral Measurement	268
B. Near and Far Infrared Spectroscopy	269
III. Interpretation of Spectra	270
A. Lignin Absorption Band Assignment	270
B. Role of Model Compounds and Lignin Derivatives in Band Assignment	272
1. Hydroxyl Groups; 2. Methyl and Methylenic Groups; 3. Carbonyl Groups; 4. Ethylenic Double Bond; 5. Aromatic Skeletal Bands.	
C. Problems and Pitfalls in the Use of Lignin Infrared Spectra	280
IV. Application of Spectra	281
A. Polymers Related to Lignin	281
B. Whole Wood Lignins	284
C. Commercial Lignins	288
D. Bark Lignin and Humic Acids	290
E. Chemotaxonomic Studies	291
F. Quantitative Analyses in Wood and Pulp	292
References	293
8. MAGNETIC RESONANCE SPECTRA	
C. H. Ludwig	
I. Introduction	299
II. Nuclear Magnetic Resonance	299
A. Introduction	299
1. Proton Magnetic Resonance Spectroscopy; 2. Special Problems with Polymers; 3. Selection of Solvents for Lignin Models and Lignins.	
B. Lignin Models and Lignin Degradation Products	301
1. Spectra of Dimeric and Oligomeric Lignin Models; 2. Ranges of Chemical Shifts for Protons in Model Acetates; 3. The identifi-	

cation of Lignin Degradation Products;	
4. Reactivity Studies on Lignin Model Compounds.	
C. Polymeric Lignin Derivatives	313
1. Interpretation of Spectra; 2. Semi-Quantitative Functional Group Analyses;	
3. Broad Line PMR Studies.	
D. Future Potential in Lignin Research	326
III. Electron Paramagnetic Resonance	326
A. Introduction	326
B. The Measurement of Free Radical Content of Lignins and Related Materials	327
1. Lignocellulose in Wood; 2. Isolated Lignins	
C. Structural and Reactivity Studies of Lignins and Models	332
References	340

PART FIVE REACTIONS OF LIGNINS

9. SOLVOLYSIS BY ACIDS AND BASES

A. F. A. Wallis

I. Introduction	345
II. Acid Solvolysis	345
A. Mild Acid Hydrolysis	345
B. Hydroxyl Displacement Reactions	350
1. Introduction of Alkoxy Groups; 2. Mercaptolysis; 3. Water Elimination.	
C. Solvolytic Ether Cleavages	354
1. α -Ether Cleavage; 2. β -Ether Cleavage	
D. Solvolytic C-C Cleavages	359
1. β - γ Cleavage; 2. α - β Cleavage	
E. Side-Chain Rearrangements	360
III. Basic Solvolysis	361
A. Solvolytic Ether Cleavages	361
1. α -Ether Cleavage; 2. β -Ether Cleavage; 3. Diaryl Ether Cleavage; 4. Methoxyl Group Cleavage.	
B. Solvolytic C-C Cleavages	365
1. β - γ Cleavage; 2. α - β Cleavage; 3. α - γ Cleavage; 4. Cleavages at High Temperatures.	
References	369

10. HALOGENATION AND NITRATION

C. W. Dence

I.	Introduction	373
II.	Halogenation and Nitration Systems	375
	A. Halogenating Agents	375
	B. Nitrating Agents	379
III.	Halogenation and Nitration Reactions of Lignin Model Compounds	381
	A. Reactions of the Aromatic Moiety	381
	1. Electrophilic Substitution; 2. Electrophilic Displacement of Ring Substituents;	
	3. Cleavage of Alkyl Aryl Ether Linkages;	
	4. Oxidation and Other Reactions.	
	B. Reactions of the Side-Chain Moiety	398
IV.	Halolignins	404
	A. Isolation and Purification	404
	B. Physical Properties	405
	C. Chemical Constitution	406
	D. Reactions	416
V.	Nitrolignin	418
	A. Isolation	418
	B. Physical Properties	418
	C. Chemical Constitution	418
	D. Reactions of Nitrolignin	421
	References	422

11. OXIDATION

H.-M. Chang and G. G. Allan

I.	Introduction	433
II.	Oxidations Degrading Lignin to Aromatic Carbonyl-Containing Compounds	434
	A. Alkaline Nitrobenzene Oxidation	434
	B. Metal Oxide Oxidations	444
	1. Probable Mechanism of Metal Oxide Oxidation; 2. Cupric Oxide Oxidation;	
	3. Other Metal Oxide Oxidations.	
	C. Molecular Oxygen and Alkali	449
	D. Permanganate Oxidation	452
III.	Oxidative Processes Degrading Aromatic Nuclei	457
	A. Acid-Catalyzed Peracetic Acid Oxidation	457
	1. Peracetic Acid Oxidation of Model Compounds; 2. Peracetic Acid Oxidation of Lignins and Wood.	

B.	Sodium Hypochlorite, Chlorine Dioxide and Sodium Chlorite	463
C.	Acid-Catalyzed Reaction of Hydrogen Peroxide	468
D.	Other Oxidation Processes Degrading Aromatic Rings	469
IV.	Oxidation Processes Limited to Specific Groups	472
A.	Periodate Oxidation	472
B.	Fremy's Salt	472
C.	Dichlorodicyano-p-quinone	473
D.	Hydrogen and Sodium Peroxides in Alkaline Media	473
V.	Photoxidation of Lignin	477
	References	478
12. REDUCTION AND HYDROGENOLYSIS		
B. F. Hrutfiord		
I.	Introduction	487
A.	The Impact of Hydrogenolysis Studies on the Elucidation of Structure	487
B.	The Concurrence of Hydrolysis and Hydrogenation	488
II.	Non-Degradative Reduction of Lignin	488
III.	Mild Catalytic Hydrogenolysis of Lignin	489
A.	Hydrogenolysis	489
B.	Characterization of Hydrogenolysis Lignin	490
C.	Monomeric Degradation Products from Hydrogenolysis Lignins	490
D.	The Isolation of Dimers from Hydrogenolysis Lignin	492
E.	Polymeric Hydrogenolysis Lignins	494
F.	Mechanism of Formation of Hydrogenolysis Lignin	496
G.	Hydrogenolysis of Milled Wood Lignin	500
H.	The Isolation of a C ₆ C ₃ Biphenyl Dimer	502
I.	Other Hydrogenolysis Studies Producing Aromatic Monomers	503
IV.	Hydrogenation of Lignins to Cyclohexane Derivatives	503
A.	Studies on Isolated Lignins	503
V.	Hydrogenolysis of Lignin by Potassium and Sodium in Liquid Ammonia	504
A.	Isolation and Characterization of Reaction Products	504
B.	Mechanism	505
	References	507
13. MODIFICATION REACTIONS		
G. Graham Allan		
I.	Introduction	511
II.	Reactive Sites Available in Lignins	511

A.	Ether Linkages	511
B.	Hydroxyl Groups	519
C.	Carbonyl Groups	531
D.	Carboxyl and Ester Functions	537
E.	Ethylenic Moieties	537
F.	Sulfur-Containing Groups	537
III.	Modifications at Structural Sites	539
A.	On Side-Chains	539
B.	Reactive Sites on Aromatic Rings	545
	References	559

14. HIGH ENERGY DEGRADATION

G. Graham Allan and Tapio Mattila

I.	Introduction	575
II.	Thermal Decomposition of Lignin	575
A.	The Nature of the Pyrolysis Residue	575
B.	The Composition of the Aqueous Distillate	576
C.	The Constituents of the Thermolysis Tar	577
D.	Gaseous Pyrolysis Products	579
E.	Effect of Additives on the Pyrolysis	579
F.	Development of Technical Thermolytic Processes	580
G.	Thermogravimetric Analysis	581
H.	Fast Cracking	583
III.	Alkali Fusion of Lignin	586
A.	Formation of Protocatechuic Acid, Catechol and Oxalic Acid	586
B.	Formation of "Lignin Acids"	587
C.	Fusion of Various Lignin Preparations	588
	References	592

PART SIX
DELIGNIFICATION IN PULPING PROCESSES**15. REACTIONS IN SULFITE PULPING**

D. W. Glennie

I.	Introduction	597
II.	Early Research on Lignin Sulfonation	597
III.	Methods of Sulfonating Lignin	598
A.	Technical Processes	598
B.	Experimental Processes	600
IV.	Methods of Isolating Lignin Sulfonates	601

V.	Mechanism of Sulfonation and Delignification	602
A.	Rate Studies and Reactive Groups in Lignin	602
	1. Wood Lignins; 2. Kinetics of Sulfonation of Model Compounds.	
B.	Topochemistry of Sulfonation and Delignification	612
C.	Use of Tracers in Sulfonation and Delignification Studies	614
VI.	Functional Groups in Lignin Sulfonates	
A.	Relationship Between Functional Groups and Molecular Weight	614
B.	Phenolic Hydroxyl Groups	618
	1. Content in Lignin Sulfonates from Bisulfite and Acid Sulfite Treatments; 2. Phenolic Hydroxyl in Lignin Sulfonates from Neutral Sulfite Pulping.	
C.	The Sulfonate Group	620
	1. Relationship of Sulfonate Group Content to Sulfonation Conditions and Polydispersity of Lignin Sulfonates; 2. Presence of Non-Sulfonic Acid Sulfur in Lignin Sulfonates; 3. Location of the Sulfonate Groups; 4. Alkaline Hydrolysis of Lignin Sulfonates.	
D.	The Carbonyl Group	625
	1. Behavior and Formation of Carbonyl Groups During Sulfonation; 2. Effect of Reduction on Sulfonatability.	
E.	Carboxyl Groups in Lignin Sulfonates	629
F.	Catechol Groups Formed by Demethylation	630
VII.	Concluding Remarks	631
	References	631

16. REACTIONS IN ALKALINE PULPING

Joseph Marton

I.	Morphological and Topochemical Considerations	639
A.	Introduction	639
B.	Pulping Chemicals	640
C.	Penetration of Pulping Liquor	642
D.	Distribution of Lignin in the Wood and Pulp Fibers	643
E.	Changes at Fiber-Liquor Interface	645
F.	Kinetics of Delignification, Reaction Mechanisms	645
II.	Base Catalyzed Fragmentation of Lignin	650
A.	Reactive Structures	650
B.	Hydrolysis of α -Ethers	651
C.	Reactions of β -O-4 Alkyl Aryl Ethers	653

III.	Condensation Reactions	658
A.	The Extent of Condensation in Delignification	658
B.	Condensation Reactions Involving Ring-Position 5	659
C.	Reactions of Kraft Lignin with Formaldehyde	662
D.	Condensations Between Side-Chain Positions	664
IV.	The Role of Sulfide in Kraft Pulping	665
A.	Differences Between Soda and Kraft Pulping	665
B.	Intermediate Thiolignins and Their Conversion to Kraft Lignins	666
C.	Cleavage of Methoxyl Groups	669
V.	Structure and Properties of Kraft Lignin	670
A.	Isolation	670
B.	Analytical Composition	671
C.	Functional Groups	673
	1. Hydroxyl Groups; 2. Carboxylic Acid, Benzyl Alcohol and -Ether Groups; 3. Un- saturated Structures; 4. Carbonyl Groups; 5. The Aromatic Ring.	
D.	Formulation for Kraft Lignin	679
E.	Spectral Properties	681
F.	Macromolecular Properties	684
	References	689

PART SEVEN MACROMOLECULAR ASPECTS

17. POLYMER PROPERTIES OF LIGNIN AND LIGNIN DERIVATIVES

D. A. I. Goring

I.	Introduction	695
II.	Molecular Weight	698
A.	Molecular Weight and Molecular Weight Distributions of Lignin Derivatives	698
B.	Reasons for the Polydispersity of Soluble Lignins	701
III.	Molecular Shape	703
A.	Conformity of Viscosity, Sedimentation and Diffusion with Behaviour Expected for Spherical Microgel	703
B.	Shape of Lignin Macromolecules as Determined by Electron Microscopy	706
IV.	Polyelectrolyte Behaviour	708
A.	Relationship of Viscometric Behaviour to Ionic Strength	708
B.	Effect of Polyelectrolyte Swelling on Gel Filtration of Lignosulphonates	710

C.	Electrophoresis	711
V.	Colloidal Behaviour	713
A.	The Dispersing Properties of Lignosulphonates and Alkali Lignins; Theory	713
B.	The Gelling Reaction of Lignosulphonate with Dichromate	716
VI.	Molecular Weight Determination	719
A.	Number Average Molecular Weights; Methods	719
B.	The Light Scattering Method; Limitations	719
C.	Ultracentrifuge Methods	720
D.	Combination of Viscosity and Diffusion Methods	723
E.	Gel Filtration	727
VII.	Glass Transitions	729
A.	Softening Temperatures, Effects of Molecular Weight and Water Content	729
B.	Glass Transitions and Adhesion Properties	733
C.	The Significance of Glass Transitions in Paper and Board Manufacture	734
D.	Thermal Expansion and Second Order Transition Phenomena	740
VIII.	Solubility, Accessibility and Sorption	741
A.	Hildebrand's Solubility Parameter and Hydrogen Bonding Capacity	741
B.	Relation Between Accessibility and Solubility	744
C.	Sorption of Vapours	745
D.	Sorption of Ions	746
IX.	The Lignin Polymer in Wood	748
A.	Network Theory	748
B.	Small-Molecule Theory	748
C.	Lignin-Carbohydrate Bonds and Possible "Snake Cage" Effects	749
D.	Aggregation by Secondary Bonds	750
E.	Heterogeneity in Original Lignin	751
F.	Topochemistry of Delignification	753
G.	Sol-Gel Concept of Lignin in Wood	758
H.	Gel Degradation Theory of Delignification	758
I.	Concluding Remarks	761
	References	761

PART EIGHT
BIOLOGICAL TRANSFORMATIONS OF LIGNINS

18. MICROBIOLOGICAL DEGRADATION AND THE FORMATION
OF HUMUS

R. F. Christman and R. T. Oglesby

I.	Introduction	769
II.	Biological Agents	769
III.	Microbiological Degradation of Lignin	771
	A. Initial Microbiological Attack	771
	B. Phenylpropanoid Intermediates	774
	C. Benzyl Derivatives	777
IV.	Conversion to Humus	
	A. The Nature of Humus	783
	B. Characteristics of Lignin Humification	785
	References	793

PART NINE
UTILIZATION OF LIGNINS

19. LOW MOLECULAR WEIGHT CHEMICALS

D. W. Goheen

I.	Introduction	797
II.	Vanillin and Related Products	798
	A. Early Studies	798
	B. Vanillin Syntheses	798
	C. Vanillin from Lignins	800
	D. Purification	804
	E. Properties, Uses and Derivatives	804
III.	Organic Sulfur Chemicals from Lignins	806
	A. Production of Dimethyl Sulfide and Methyl Mercaptan	806
	B. Mechanism of Dimethyl Sulfide and Methyl Mercaptan Formation	807
	C. Properties and Reactions of Dimethyl Sulfide	809
	1. Properties; 2. Halogenation; 3. Reactions Involving Unshared Electron Pairs; 4. Oxidations.	
	D. Dimethyl Sulfoxide	812
	1. As a Reactant; 2. As a Catalyzing Reaction Solvent; 3. As a Solubilizing Reaction Solvent; 4. In Biological Systems.
