

Contents

1. Microscopic Structure of Wood	3
1-1 Introduction	3
1-2 Gross Structure of Softwoods	4
1-3 Gross Structure of Hardwoods	11
1-4 Sapwood Versus Heartwood	16
1-5 Polarization and Double Refraction	17
1-6 Electron Microscopy	21
1-7 Structure of the Cell Walls	22
Literature Cited	31
2. X-Ray Structure of Cellulose	34
2-1 X-Ray Diffraction	34
2-2 Unit Cell of Cellulose	37
2-3 Crystallite Structure	43
2-4 Orientation	45
2-5 Development of the Cell Walls	46
2-6 Summary	47
Literature Cited	48
3. Specific Gravities and Void Volumes	50
3-1 Bulk Specific Gravity of Wood	50
3-2 Specific Gravity of Wood and Cellulose Substance	54
3-3 Specific Gravity of Adsorbed Water	63
3-4 Void Volume of Wood	63
Literature Cited	64

4.	Solvents for Cellulose and Cellulose Derivatives	66
4-1	Cellulose Solvents	66
4-2	Cellulose-Derivative Solvents	74
Literature Cited	76	
5.	Molecular Properties of Cellulose ,in Solution	78
5-1	End-Group Measurements	79
5-2	Osmotic-Pressure Measurements	82
5-3	Ultracentrifuge Measurements	86
5-4	Diffusion Measurements	95
5-5	Viscosity Measurements	98
5-6	Light-Scattering Measurements	107
5-7	Effect of Treatments upon the Average Degree of Polymerization	109
5-8	Polydispersity	112
5-9	Spreading Measurements	115
5-10	Conclusions	116
Literature Cited	118	
6.	Molecular Properties of Dissolved Lignin	122
6-1	Lignin Preparations and Their Solubility	122
6-2	Molecular Properties of Lignin	124
Literature Cited	130	
7.	The Phenomenon of Adsorption	132
7-1	Definition of Terms	132
7-2	Extent of Adsorption	133
7-3	Types of Adsorption	134
7-4	Sorption Measurements	136
7-5	Sorption Equations	138
Literature Cited	141	
8.	Sorption of Water Vapor by Cellulosic Materials	142
8-1	Ways in Which Water Is Held	142
8-2	Sorption Hysteresis	145
8-3	Effect of Temperature	149
8-4	Fiber-Saturation Point	154
8-5	Effect of Chemical and Mechanical Treatments	155
8-6	Monomolecular Adsorption	160
8-7	Sorption of Deuterium Oxide	163
Literature Cited	164	

9. Sorption of Gases and Nonaqueous Vapors	166
9-1 Sorption of Nonpolar Gases	166
9-2 Sorption of Polar Gases	171
9-3 Sorption of Nonaqueous Vapors	172
Literature Cited	173
10. Selective Adsorption from Solution	175
10-1 Measurement of pH	175
10-2 Adsorption of Acids	178
10-3 Adsorption of Alkalies	179
10-4 Adsorption of Salts	181
10-5 Adsorption of Organic Compounds	182
Literature Cited	184
11. Internal Surface and Accessibility	186
11-1 Surface of Microscopically Visible Structure	186
11-2 Internal Area of Contact with Swelling Agents	192
11-3 Accessibility of Cellulose	196
Literature Cited	199
12. Thermodynamics of Adsorption	201
12-1 Measurement of Heat of Wetting	202
12-2 Integral Heat of Wetting	204
12-3 Differential Heat of Wetting	207
12-4 Free Energy and Entropy of Adsorption	211
12-5 Free-Surface Energy of Adsorption	212
Literature Cited	214
13. Shrinking and Swelling of Wood	215
13-1 Nature and Causes of Shrinking and Swelling	215
13-2 Effect of Specific Gravity on Shrinking and Swelling	218
13-3 Shrinking and Swelling of Wood Substance	227
13-4 Tangential Versus Radial Shrinking and Swelling	228
13-5 Swelling Pressure	233
Literature Cited	234
14. Shrinking and Swelling of Cellulose	236
14-1 Shrinking and Swelling of Fibers	236
14-2 Shrinking and Swelling of Paper	239
Literature Cited	247

- 15. Swelling in Aqueous Solutions and Nonaqueous Liquids 248**
- 15-1 Swelling in Aqueous Solutions 248
- 15-2 Mechanisms of Swelling in Solutions 251
- 15-3 Directional Swelling in Solutions 254
- 15-4 Effect of Aqueous Solutions upon Shrinkage 255
- 15-5 Swelling in Nonaqueous Liquids 257
- 15-6 Replacement of One Swelling Liquid by Another 260
- Literature Cited 263
- 16. Mechanical Properties of Cellulose Fibers and Wood 264**
- 16-1 Strength Properties of Fibers 264
- 16-2 Strength Properties of Wood 268
- 16-3 Composite Structures 280
- Literature Cited 280
- 17. Thermal Properties 283**
- 17-1 Specific Heat of Wood and Cellulose 283
- 17-2 Thermal Conductivity of Wood and Cellulose 284
- 17-3 Coefficient of Linear Thermal Expansion 288
- 17-4 Exothermic Reaction Temperature 290
- 17-5 Heat of Combustion 292
- Literature Cited 293
- 18. Rates of Hydrolysis and of Thermal Degradation 294**
- 18-1 Principles of Reaction Rate 294
- 18-2 Rate of Hydrolysis of Cellulose 296
- 18-3 Rate of Thermal Degradation 304
- Literature Cited 317
- 19. Dimensional Stabilization 312**
- 19-1 Cross-Laminating 313
- 19-2 Coatings 314
- 19-3 Reduction in Hygroscopicity 316
- 19-4 Bulking Treatments 320
- 19-5 Formaldehyde Cross-Linking 338
- Literature Cited 347
- 20. Densified Wood 343**
- 20-1 Plasticizing Wood 343
- 20-2 Resin-Treated Compressed Wood (Compreg) 346
- 20-3 Stable Untreated Compressed Wood (Staypak) 353
- Literature Cited 358

21. Electrical Properties	359
21-1 Direct-Current Conductivity	359
21-2 High-Frequency Alternating Current	370
21-3 Moisture-Content Determinations	375
21-4 Electrokinetics	378
Literature Cited	384
22. Capillary Properties	386
22-1 Static Measurements	387
22-2 Flow Measurements	390
22-3 Overcoming of Capillarity	401
22-4 Ultrafiltration	407
Literature Cited	408
23. Diffusion in Wood	410
23-1 Nature of Diffusion	410
23-2 Diffusion of Solutes into Solvent-Saturated Wood	412
23-3 Diffusion Through the Void Structure of Wood	421
23-4 Diffusion in Cellulose and Wood Substance	423
23-5 Diffusion of Water in Wood	429
23-6 Theoretical Drying Diffusion Coefficients	435
Literature Cited	439
24. Drying Wood	441
24-1 Movement of Free Water	441
24-2 Stress Limitations on Drying	447
24-3 New and Suggested Means of Improving Drying	450
Literature Cited	457
General References on Air- and Kiln-Drying of Wood	458
25. Wood Preservation	459
25-1 Extent and Nature of Deterioration by Organisms	459
25-2 Prevention of Wood Deterioration	463
25-3 Toxic Chemicals	464
25-4 Measurement of Toxicity	466
25-5 Preservation Without Toxic Chemicals	469
25-6 Nonpressure-Treating Methods	470
25-7 Pressure-Treating Methods	476

25-8	Theoretical Aspects of Treatment	477
25-9	Fire-Retardant Treatments	481
	Literature Cited	485
26.	Adhesion	488
26-1	Introduction	488
26-2	Liquid-Liquid Systems	489
26-3	Solid Systems	490
26-4	Solid-Liquid Systems Involving Imperfect Wetting	493
26-5	Nonswelling Solid-Wetting Liquid Systems	494
26-6	Swelling Solid-Wetting Liquid Systems	497
26-7	Actual Versus Theoretical Bond Strengths	502
26-8	Requirements for Bonding	508
26-9	Natural Wood-Bonding Agents	509
26-10	Synthetic Resin Bonding Agents	511
	Literature Cited	514
27.	Fiber-Fiber Bonding	517
27-1	Fiber-Liquid Relationships	517
27-2	Pulp Processing by Beating	518
27-3	Factors Affecting the Strength of Paper	522
27-4	Measuring of Sheet-Forming Properties	524
27-5	Correlation of Fiber Properties with Sheet Properties	535
27-6	Summary	537
	Literature Cited	537
	Index	541
