

CONTENTS

	Page
Part 1 Manufacture	
1. Advantage and Applications	1
2. Factory Layout and Equipment	4
3. Cramping Beds	17
4. Factory control and capital cost	30
5. Manufacture	35
6. Inspection-Quality control	108
7. Tests for strength of glue lines	121
8. Cost of Manufacturing Glulam Members	125
Part 2 Adhesives	
9. Adhesives – General Information	133
10. Why is an adhesive necessary?	140
11. Some factors affecting adhesion	144
12. Specific and mechanical adhesion in wood	152
13. Choice of adhesive	154
14. Types of adhesives for use with timber	164
15. Factors affecting the formation of a good glue bond	193
16. Strength of a glued timber joint	202
17. Methods of Testing Adhesives to be used in timber structures	207
Part 3 Timber	
18. Nature and properties of wood	221
19. Strength properties of timber	268
20. Features influencing the strength properties of timber	276
21. Working or grade stress for timber	283
22. Appearance grades of imported timber used for glued laminated construction	287
23. Timber grading and working stress for glulam construction	293
24. End jointing of laminations	319
25. Stress-modification factors	331
26. Properties of species for which basic stresses have been published	336
27. Production and the finished glulam structure	354
Appendices	377
A : Standard Specifications for structural Glued Laminated Douglas Fir (Coast Region) Timber (1962 Edition)	377
B : Standard Specifications for Fabricating Structural Glued Laminated Timbers of Douglas Fir (Coast Region) : Edition 1962	383
C : Production Standards for Structural Glued Laminated Timber	387
D : List of timbers used in the text	403
E : Standard types of metal connections	404
Index	407
