

CONTENTS

- 12-1 Pilot Plant Procedure for the Assessment of the Screening Ability of Pressure Sensitive Adhesive
- 12-2 Europe looks to the US Postal Service PSA Project with Great Expectations
- 12-3 Views on Recyclability of Pressure Sensitive Labels in Europe
- 13-1 Generation of Post-Consumer Environmentally Benign Pressure Sensitive Adhesive Stamp Samples for Recycling Mill Trials
- 13-2 Development of USPS Laboratory and Pilot-Scale Testing Protocols
- 13-3 Laboratory- and Pilot-Scale Evaluations of environmentally Benign PSA Stamps
- 14-1 Deinking of Furnishes Containing Water-Based Inks Using a Laboratory Apparatus Designed for Process Water Recycle
- 14-2 Visualization of Flexographic and Offset Ink at bubble Surfaces
- 14-3 Deinking Difficulties Related to Waterbased Ink Printed papers Analysis of Redeposition Phenomena
- 15-1 Improving Wax removal in OCC Pulping Systems
- 15-2 Removal of Wax and Stickies from OCC by Froth Flotation
- 15-3 Chemical Dispersion of Wax Coatings at Inland –Maysville
- 16-1 Challenges in the Development of Self-Adhesive Stamps
- 16-2 Evolution of United States Postal Service Postage Stamp Requirements
- 16-3 The Effect of Printing Methods on the Recyclability of “Next-Generation” Pressure Sensitive Adhesives for Postage Stamp Use
- 16-4 The Effect of release Liner Materials on Adhesive Contaminants, Paper Recycling and Recycled Paper Properties
- 17-1 A Pilot Plant Study of the Recyclability of Pressure Sensitive Adhesives (PSA)
- 17-2 Closed loop Pilot Plant Results Recycling and Environmentally Benign PSA Using A Wood-Free Recovered Paper Furnish
- 17-3 Behavior of PSAs : MOW and Sorted Office Paper with High Content of PSA’s
- 17-4 Summary of Pilot facility Protocol Assessments
- 18-1 Recycling Behavior of Microsphere Adhesives
- 18-2 A Novel Application of TAPPI T277 to Determine Macro Stickies Disintegration And Agglomeration in the Recycle Process
- 18-3 Screening Technology : Industrial Experience with Compact, High Performance, High Consistency Screens
- 19-1 Effects of Fines Concentration on Mechanical properties of Recycled Paper
- 19-2 Preventing Loss and Restoring Water Retention Values to Pulp by Fiber Loading
- 19-3 Recycling Old Telephone Directories – Deinking with a New Generation Laboratory Flotation Cell

19-4	Measuring Ink Contents : From Pulper to Deinked Pulp
20-1	Effects of Deinking Chemicals on Sticky Depositions
20-2	Review of Quantification Methods for PSA and Other stickies
20-3	Quantification of Pressure Sensitive Adhesives, Residual Ink, and Other Colored Process Contaminants Using Dye and Color Image Analysis
21	Recycling Mill Trials – Panel Discussion Units of Measurement
