Foreword	7
Preface to the first edition	9
Preface to the second edition	11

I. Pulp and Paper Science

1 The bonding of matter	14	6 Structure of wood and other fibers	119
2 Some properties of fluids	34	7 Bonding of cellulose surfaces	141
3 Some effects of forces	57	8 Fibrillation and fiber bonding	160
4 Surface phenomena	79	9 Properties of pulps	184
5 Carbohydrates, cellulose, and lignin	100	10 The making of paper	212

II. Pulp Treatment and Tests

11 Moisture, weight, and handling of pulp	242	14 Laboratory beating	356
12 Nature and effects of beating	277	15 Test sheet making	408
13 Mill beating and refining	306	16 Hand sheet testing	428

III. Fiber Properties and Tests

17 Fiber length	452	21 Wet fiber compactability*	560
18 Fiber coarseness	503	22 Drainage of water from pulp	578
19 Intrinsic fiber strength	518	23 Surface measurements	619
20 Cohesiveness	536	24 Wet-web strength and stretch	630

IV. Control and Analysis

25 Laboratory control of beating and refining	656	28 Chemical and microscopical analysis	704
26 Efficiency of refiners and systems	665	29 Optical characteristics, dirt, and shives	716
27 Characterization and control of mechanical and semimechanical pulps	675	30 Raw materials for pulp	743
		31 Filling and bonding materials	770

V. Practical Considerations

32 Formulas for pulp properties	790	35 Tests and testing data	839
33 Pulp and paper relationships	813	36 Collection and filing of data	850
34 Humidity and control rooms	826		

Epilogue	857
Author Index	858
Subject Index	865

Areas of Circles	874
Conversion Tables	875
About the Author	878

*Compact (a, i)bility is not listed in Webster's or OED. Following Fowler's advice, we have chosen to spell it with an *a*—ability to be compacted
