

CONTENTS

1-1 Welcome to the TAPPI wet end operations seminar	1
1-2 Introduction to wet end operations	3
1-3 General screening and cleaning systems	5
1-4 Design principles for approach piping	13
1-5 Mass flow balance	19
1-6 Some factors in wet end barring	25
2-1 Headbox design development, high speed and slow speed	29
2-2 Headbox maintenance and operational problems that affect formation	33
2-3 Headbox operations	37
3-1 The fundamental concepts underlying the formation , structure , and behavior of paper	41
3-2 The practical aspects of formation	53
3-3 Machine studies of formation	57
3-4 Twin wire forming – a process in evolution	67
4-1 Wet – end showers and white – water shower system considerations	79
4-1 A Fourdrinier doctors design , application and maintenance	85
4-2 Paper machine vacuum systems	91
4-3 The exhauster as a vacuum source	99
4-4 Fourdrinier drive requirements	105
5-1 Water management for the single wire machine	109
5-2 Operation and optimization of vacuum – augmented foil units – part II – an update	135
5-3 Some synthetic wire application considerations	145
6-1 The effect of forming fabrics on printability and runnability of paper produced on twin – wire machines	153
6-2 Wear of forming fabrics	163
6-3 Multished wires as an answer to individual paper production requirements	171
7-1 Principles of measurement as applied to paper machine wet end operations	181
7-2 Analog control techniques and tuning	195
7-3 Digital process control at the wet end	205
7-4 Paper machine wet end control	209
7-5 Troubleshooting the wet end approach – flow system : pipeline pressure pulsation analysis	221
8-1 Monitoring the formation of a sheet	231
8-2 Techniques to extend your sense of sight for paper machine analysis	237
8-3 Technology for papermaking process stability and wet end operation studies	247

9-1 The thin channel converflo headbox – A new design single or multi – layer forming	253
9-2 The verti –forma wet end a 1982 progress report	261
9-3 The fourdrinier mounted former – a new twin – wire development	269
9-4 The step diffusor headbox	277
9-5 KMW twin – wire formers	281
9-6 Review of the ultra former	287
9-7 Sandy hill hydraulic headbox system	291
9-8 Valmet sym – nozzle headbox	293
9-9 Recent development of the voith w – type high turbulence headbox	295
