

CONTENTS

1-1 Advantages of co – binder coatings for varied printing processes	5
1-2 The effects in paper and board coatings of carboxylated S.B.R. latex particle size with protein co – binder	9
1-3 Development of total synthetic binder for rotogravure paper	25
1-4 Optimization of coated board properties	43
1-5 Coat weight variation for evaluating binder migration of air knife coatings on unbleached kraft board	53
3-1 Case histories in solving coating problems with the electron microprobe	61
3-2 The effect of mixed binder systems on the film volume and pore size distribution of isolated clay coatings	69
3-3 An improvement in the determination of Ro and scattering coefficients for paper, Pigments and coatings	75
3-4 An application of infrared spectroscopy to the studies of binder migration in paper coatings	93
3-5 Coat weight by X- Ray fluorescence	99
5-1 Developments in filtration of aqueous clay coatings since 1960	103
5-2 Correlation between drying conditions and quality of coated paper	109
5-3 Coating reclaim at consolidated papers , Inc	117
5-4 Burnout , a coat weight determination test re – examined	123
5-5 The twinblade coating method	133
