

CONTENTS

Foreword

v

SECTION 1. Coated Paper Trends, Markets

- 1. LWC Technology Shaped by Changing Markets and New Grade Competition 3
- 2. Coated Paper Trends: U.S. Producers Boost Quality with New Technology 8

SECTION 2. Pigments, Polymers, Binders

- 3. Kaolin Clay: Examination of Coating Characteristics by Grade, End Uses 13
- 4. Fine Calcined Kaolin Pigments Are Superior for Many Coating Uses 18
- 5. Excessive Viscosity Specifications Can Harm Coating Performance 23
- 6. Coating Properties Can Be Optimized with "Customized" Blended Clays 27
- 7. Consumption of Pigments Continues to Be Driven by Need for Opacity 30
- 8. Hollow-Sphere Pigment Improves Gloss, Printability of Paper 32
- 9. Coating, Wet End Filling Improved by Using New Structured Pigments 34
- 10. Talc Use in Coating Formulas Gains Popularity in European Paper Mills 38
- 11. Bacteria Cellulose Has Potential Application as New Paper Coating 41
- 12. Kruger Cuts Coating Pigment Losses \$300,000/Year with New Filter System 44
- 13. Pigment Suppliers/Customers Set Guidelines for SQC Data Reporting 45

SECTION 3. Mill Coater Installations

- 14. Blandin Paper's New Coater Features Latest Technology, Control Strategy 51
- 15. Gulf States Completes Major Coater Rebuild on No. 1 Paper Machine 54
- 16. Watervliet Paper Applies Double Coating Using a Single Operation 57
- 17. Gilman Paper Rebuilds Coater and Installs the "Ultimate" Air Knife 59
- 18. New Coaters Improve Printability of Folding Combination Boxboard 61

SECTION 4. North American Coated Paper Machine Expansions

- 19. Boise Brings Second Rebuilt Machine Online at Rumford Coated Paper Mill 65
- 20. Blandin Paper Completes \$350-Million Lightweight Coated Expansion Project 68
- 21. Repap Begins Major Coated Free-Sheet Capacity Expansion at Midtec 72
- 22. Consolidated Paper's Biron 26 LWC Paper Machine Starts Up Smoothly 77
- 23. St. Francisville Modernizations Keep James River Mill a Quality Leader 80
- 24. Bowater Carolina Adds Lightweight Coated Paper Machine at Catawba 83
- 25. Miramichi Mill is Now Producing LWC with Pulp from Two Canadian Mills 89

SECTION 5. World Coated Paper Machine Expansions

26. Enzo-Gutzeit Rebuilds Kaukopaa PM 6 to Produce New Matt-Finished Papers	95
27. Rauma Converts Newsprint Machine to Surface Treated and LWC Grades	97
28. New Caledonian Paper Mill Begins UK's First Domestic LWC Production	99
29. Haindl Papier Takes Advantage of Lightweight Coated Boom in Europe	102
30. World's Widest LWC Line Starts Up at UPM's Kaipola Mill in Finland	104
31. Tenma Expands Coated Board Output as Thailand Domestic Demand Rises	107
32. Szolnok PM 5 Fills Hungary's Rising Demand for Coated Printing Papers	110
33. Leykam Chooses High-Tech Flexibility for Ultra-Modem LWC Line in Austria	113
34. Kymi Gives Birth to New Generation Business Paper at Kuusankoski Mill	116
35. Tampella Moves into Coated Papers with 5.4-m MFC Machine at Anjala	119

SECTION 6. Advances in Drying

36. Paper Qualities Influenced by Drying Techniques and Surface Coatings	125
37. Flotation, Infrared Drying Boosts Efficiency of Paper Coating Stage	131
38. Surface of Coated Grades Enhanced by High-Intensity Infrared Drying	135

SECTION 7. Coating Kitchens and Coater Control

39. Gulf States Expands Coating Operation with Automated Kitchen Control System	145
40. Automated System Prepares Coating for World's Largest LWC Machine	149
41. Mead Escanaba Modernizes Coating Make-Down Area for Better Mixing	152
42. Coating Kitchen, Control System Improves Midtec's Grade Capability	155
43. PLC's Maximize Product Quality, Keep Coating Process on Target	157
44. Scotland's Caledonian Paper Mill Boosts Paper Machine Runability	160
45. Sheet Counter Uses a Collimated Light Beam to Ensure Accuracy	163
Index	165
