

CONTENTS

Introduction : textile finishing – C S whewell (president of the textile institute)

1. Liquid ammonia treatment of cotton fabrics especially as a pre – treatment For easy – care finishing	1
2. Monitoring and controlling bleaching and vat – dyeing processes	2
3. The calendering of nylon 6.6 fabric	3
4. The specialist finishing of synthetic – fibre industrial fabrics	4
5. Transfer printing of natural fibres with radio – frequency heating	5
6. The transfer printing of resin – treated cellulosic materials	6
7. Improving handle and texture	7
8. Development of the ekofast continuous wool / worsted finishing processes	8
9. Long liquor – exhaust processes for the application of shrink – resist polymers to unchlorinated wool	9
10. Process control in the dyeing of polyester and polyester / cellulosic blends	10
11. Controlled low – add – on application of finishing liquors in easy – care finishing	11
12. Modern carpet back – finishing	12
13. The suction de – watering of fabrics containing wool	13
14. Drying methods for fabrics manufactured from all types of blends of man – made and natural fibres	14
15. Problems of dryer control in textile finishing	15

The conference programme also includes the following papers, which do not appear in
This book

1. The design of different kinds of steamer
2. The mercerization of weft – knitted fabrics
