677.02832 HAG

Contents

1 Electrospinning of Polymeric Nanofibres 1
1.1 Introduction 1
1.2 Processing Condition 2
1.2.1 Applied Voltage 2
1.2.2 Feed Rate 2
1.3 Theory and Modeling 4
1.4 Concluding Remarks 8

2 Polymeric Nanofibre Fabrication via Electrospinning Process 11
2.1 Introduction 11
2.2 Experimental 15
2.2.1 Solution Preparation and Electrospinning 15
2.2.2 Choice of Parameters and Range 16
2.2.3 Experimental Design 19
2.2.4 Response Surface Methodology 24
2.3 Results and Discussion 26
2.3.1 Response Surfaces for Mean Fibre Diameter 31
2.3.1.1 Solution Concentration 31
2.3.1.2 Spinning Distance 32
2.3.1.3 Applied Voltage 33
2.3.1.4 Volume Flow Rate 34
2.3.2 Response Surfaces for Standard Deviation of Fibre Diameter 34

2.3.2.1 Solution Concentration 34
2.3.2.2 Spinning Distance 36
2.3.2.3 Applied Voltage 36
2.3.2.4 Volume Flow Rate 38
2.4 Conclusion 38
2.4.1 Mean Fibre Diameter 39
2.4.2 Standard Deviation of Fibre Diameter 39

3 Structure Formation of Polymeric Nanofibres in Electrospinning 45
3.1 Introduction 45
3.2 Methodology 47
3.2.1 Simulation of Electrospun Webs 47
3.2.2 Fibre Diameter Measurement 48
3.2.2.1 Manual Method 48
3.2.2.2 Distance Transform 49
3.2.2.3 Direct Tracking 51
3.2.3 Real Webs Treatment 52
3.3 Experimental 54
3.4 Results and Discussion 54
3.5 Conclusion 63

4 Optimisation of the Electrospinning Process 67
4.1 Introduction 67
4.2 Methodology 68
4.2.1 Measurement of Fibre Diameter 68
4.2.1.1 Manual Method 69
4.2.1.2 Distance Transform Method 70
4.2.1.3 New Distance Transform Method 74

4.2.2 Validation of the Methods 79
4.2.3 Thresholding 80
4.3 Experimental 82
4.4 Results and Discussion 84
4.5 Conclusion 91

5 Practical Hints on the Processing Parameters and Geometric Properties of Electrospun Nanofibres 97
5.1 Introduction 97
5.2 Methodology 98
5.2.1 Sieving Methods 101
5.2.2 Mercury Porosimetry 101
5.2.3 Flow Porosimetry (Bubble Point Method) 102
5.2.4 Image Analysis 103
5.2.4.1 Real Webs 104
5.2.4.2 Simulated Webs 105
5.3 Experimental 106
5.4 Results and Discussion 108
5.5 Conclusion 118

6 Practical Hints on the Production of Electrospun Nanofibres from Regenerated Silk Fibroin 121
6.1 Introduction 121
6.2 Effect of Systematic Parameters on Electrospun Nanofibres 122
6.2.1 Solution Properties 122
6.2.2 Viscosity 122
6.2.3 Solution Concentration 122
6.2.4 Molecular Weight 123

6.2.5 Surface Tension 123
6.2.6 Solution Conductivity 123
6.2.7 Applied Voltage 124
6.2.8 Feed Rate 124
6.3 Experimental 124
6.3.1 Electrospinning and Preparation of Nanofibrous Media 124
6.3.2 Image Analysis using Image Processing Algorithms 125
6.4 Results and Discussion 126
6.4.1 Diameter Distribution of Nanofibres 126
6.4.2 Distribution of Nanofibre Orientation 130
6.4.3 Porosity 130
6.5 Conclusions 130

7 Characterisation of Polymeric Electrospun Nanofibres 133
7.1 Introduction 133
7.1.1 Electrospinning Setup 135
7.2 Effect of Systematic Parameters on Electrospun Nanofibres 139
7.2.1 Solution Properties 139
7.2.1.1 Viscosity 139
7.2.1.2. Solution Concentration 140
7.2.1.3 Molecular Weight 141
7.2.1.4 Surface Tension 141
7.2.1.5 Solution Conductivity 142
7.2.2 Processing Condition 144
7.2.2.1 Applied Voltage 144
7.2.2.2 Feed Rate 144

7.3 Experimental 145
7.4 Result and Discussion 147
7.5 Conclusion 150

8 Formation of Polymeric Electrospun Nanofibres 153
8.1 Overview 153
8.2 Aim of the Project 153
8.3 Experimental 154
8.4 Results and Discussion 155
8.5 Conclusion 163

9 Experimental Study on Electrospinning of Polymeric Nanofibres 165
9.1 Introduction 165
9.2 Experimental 166
9.2.1 Materials 166
9.2.2 Sample Preparation 167
9.2.3 Electrospinning 167
9.2.4 Characterisation 168
9.3 Results and Discussion 169
9.3.1 Effect of Polyaniline Content 169
9.3.2 Effect of Electrospinning Temperature 172
9.3.3 Effect of Applied Voltage 177
9.4 Conclusions 178
