

CONTENTS

1. General introduction	2
2. The mechanical properties of fibres and fibre thermodynamics	43
3. Optical microscopy of fibres	69
4. X – Ray studies of amorphous polymers by radial distribution function techniques	181
5. The use of synchrotron radiation as a source for X- Ray diffraction	219
6. Application of electron diffraction to the investigation of fibrous substances	240
7. Infra – red spectroscopy techniques and applications	271
8. Molecular dimensions	325
9. Scanning electron microscopy and X – Ray microanalysis	349
10. Light scattering techniques	381
11. Nuclear magnetic resonance spectroscopy	421
12. Raman scattering from synthetic fibers	483
13. Electron pin resonance	505
Subject index	557
