

CONTENTS

1. A new process for fibre – network yarns from polypropylene and high – density Polyethylene	1
2. A new theory of drawing	13
3. Combined – filament yarns	41
4. Recent developments in glass – fibre yarns	48
5. Fundamentals of core – ply textured and elastomeric – fibre yarns	56
6. The comparative merits of the principal break – spinning systems	75
7. A Basic investigation of the behaviour of cotton fibres subjected to aerodynamic forces	96
8. Open – end spinning and yarn quality	109
9. A New method of manufacturing twistless yarns	122
10. Open – end spinning in Czechoslovakia	130
11. Whiter break – spinning ?	141
12. A Comparison of drafting force in ambler superdraft and uniflex spinning and its effect on yarn Irregularity	150
13. The present state of automation in cotton spinning	160
14. An Analysis of drafting behaviour of worsted slivers with particular reference to the automatic control of drafting irregularities	169
15. The optimization of yarn regularity	181
16. Yarn irregularity as an engineering problem	196
Italian summaries of the conference papers	205
