

## CONTENTS

**Conservation and degradation of textiles**

1. Charting the future : conservation principles of henry francis du pont	3
2. Age determination of textiles from single – fiber creep measurements	19
3. Evaluation of degradation in museum textiles using property	41
4. Studying the cause and type of fiber damage in textile materials by scanning electron microscopy	77
5. Fractography of historic silk fibers	95
6. Degradation of silk by heat and light	111

**Characterization and preservation of textiles**

7. A Systematic method for differentiating between 18 <sup>th</sup> century painted – printed Chinese and western silks	131
8. Identification of dyes in historic textile materials	153
9. Analysis of natural dyes on wool substrates using reverse – phase high – performance liquid chromatography	175
10. 3600 years of purple – shell dyeing : characterization of hyacinthine purple ( Tekhelet )	187
11. Mordanted, natural – dyed wool and silk fabrics : light and burial – induced changes in the color and tensile properties	199
12. Experimental studies on the effect of aqueous and nonaqueous treatments on historic textiles	211
13. Characterization of metallic yarns in historic Persian textiles by microanalysis	231
14. Characterization of selected prehistoric fabrics of southeastern north America	253
15. Replacement of protein and cellulosic fibers by copper minerals and the formation of textile Pseudomorphs	277

**Conservation degradation and characterization of paper**

16. Standards for archival materials	291
17. Monitoring the autoxidation of paper using photographic materials	317
18. The kinetics of cellulose deterioration	329
19. Fourier transform IR spectroscopy and electron spectroscopy for chemical analysis : use in the study of paper documents	349
20. Gel permeation chromatography : use in estimating the effect of water washing on the long - term stability of cellulosic fibers	363
21. Influence of the hemicellulose fraction on thermal and photochemical discoloration of paper	377
22. The influence of copper and iron on the permanence of paper	387
23. Accelerated aging of cellulosic textiles at different temperatures : the effect of tetrahydridoborate reduction	411.

24. Stabilization of paper through sodium borohydride treatment	427
