

## CONTENTS

I. Polymerization of propylene	1
A. Development of polypropylene	1
B. Molecular structure of polypropylene	1
C. Advantages of stereospecific polymerization	3
II. Fiber manufacture operations	9
A. Extrusion	9
B. Draw – down quenching and drying	11
C. orientation relaxation and wind – up	12
III. Influence of fiber processing conditions on the structural and physical properties Of polypropylene filaments	13
A. General considerations of crystallinity orientation and molecular weight of fibers	13
B. Influence of fiber process conditions on the structural characteristics of Polypropylene fibers	15
C. Effects of polymer structural parameters and fiber process conditions on the Physical properties of polypropylene fibers	31
IV. Comparative fiber physical properties	71
A General properties	71
B Viscoelastic behavior	75
C. Environmental behavior	121
V. Polypropylene films	149
A. Properties of packaging films	149
B. Manufacture and processing conditions	155
C. Applications	163
