

CONTENTS

Part I. Fibers from organic polymers

1. Methods of preparing thermally resistant fibers	3
2. Meaningful evaluation techniques for new temperature resistant fibers	21
3. Behavior of polyaromatic fibers and yarns in unique environments	23
4. Laboratory tests which predict end – use performance under high temperature conditions	49
5. Fiber of an all – para – oriented ordered aromatic copolyamide	63
6. Fibers from ordered benzheterocycle – amide copolymers	75
7. Aromatic poly – 1,3,4,-oxadiazole fibers II. Acid – catalyzed cyclodehydration of polyhydrazides to poly – 1,3,4- oxadiazoles	89
8. Fibers from ordered oxadiazole – imide copolymers	107
9. Ordered aromatic copoly (1,3,4 – Thiadiazole) fibers	119
10. Properties of PBI fiber	133
11. Fibers from ordered benzheterocycle – imide copolymers	145
12. Poly (bisbenzimidazobenzophenanthroline) fiber and yarn properties	159
13. Thermal and light stability of aromatic bithiazole – amide fibers	167
14. Stabilization of aromatic bithiazole – amide fibers	177
15. Enhancement of aromatic organic polymers for temperature – resistant fibers	195
Part II. Fibers of carbon and graphite	
16. An introduction to carbon / graphite fibers	213
17. The effect of length changes during the oxidation of polyacrylonitrile fibers on the young's modulus of carbon – graphite fibers	215
18. Factors affecting the tensile strength of carbon – graphite fibers	229
19. Aspects of carbon fiber development at A.E.R.E. Harwell	245
20. The structure and elastic properties of carbon fibers	255
21. Characterization of highly anisotropic graphite filament	263
22. Carbon fibers from cellulose fibers	271
23. Physical properties of high modulus graphite fibers made from a rayon precursor	285
24. The relationship between preferred orientation and young's modulus of carbon fibers	293
25. Methods for producing high modulus carbon yarn	303
26. Highly crystallite – oriented carbon fibers from polymeric fibers	305
27. Graphite fibers from an aromatic polyamide yarn	315
28. Effects of heat – treatment under stress on MP carbon	325
29. Production of molten pitch carbon fiber	331

30. Preparation of highly isotropic carbon filament	339
31. Properties of boron carbide yarn prepared from carbon yarn	365
32. Preparation of boron nitride fibers	377
33. Ceramic fibers and textiles from organic precursors	387
34. Viscose process ceramic fiber precursors	395
