

CONTENTS

1. The effect of thread – spacing and yarn counts on the structures produced by weave interlacing	1
2. The effect of fabric structure on wrinkling – miriam shiloh	14
3. A new development in the manufacture of pile fabrics by a sewing – knitting technique	30
4. Combined weft – knitted – woven fabrics	40
5. A Contribution to solving the problems of three – dimensional shaping of knitted Products	46
6. Melded fabrics from heterofil fibres	60
7. The present state and future prospects of non – woven fabrics	70
8. The geometry of warp – knitted structures and its application to fabric specifications	85
9. Tests on elastic and stretch fabrics : the relations between the elastic properties of yarns and those of fabrics	95
10. The end – use characteristics and mechanical properties of fabrics and their relationship to the configuration and properties of the constituent fibres	112
11. Factors influencing the choice of method of fabric manufacture	123
12. Weft – knitted fabrics and garments machine design and fashion	131
13. Some energy – transfer considerations in studying warp – yarn stresses	146
14. The deformation and recovery of cut – pile carpets : A theoretical analysis	159
15. The shape of the loops in an undeformed plain weft – knitted fabric	181
16. Problems of protection and comfort in modern apparel fabrics	197
