

CONTENTS

VOLUME 1

1. Structural principles of fiber – forming polymers	1
2. Physical fundamentals of the fiber – spinning processes	13
3. Fundamental aspects of wet – spinning solutions	95
4. Fundamental aspects of solution dry – spinning	133
5. Principles of melt – spinning	169
6. Principles of spinning of emulsion and suspension	237
7. Transition phenomena and their importance for fiber structure	241
8. The role of chain folding in fibers	283
9. Current ideas on the morphology of synthetic fibers	341
10. Conjugate fibers	375
Author index	409
Subject index	421
