

## CONTENTS

**Characterization of fibers by instrumental methods**

1. Instrumental analysis of modified cottons	3
2. Cross – polarization / magic angle spinning <sup>13</sup> C-NMR study; molecular chain conformations of native and regenerated cellulose	27
3. Conformational accessibility of some simple polyglucosides	43
4. Quantitative analysis of textiles by IR spectroscopy : A comparison of fourier transform and dispersive techniques	61
5. Electron spin resonance studies on oxygen diffusion in $\gamma$ – irradiated polypropylene fibers around the glassy transition temperature	75

**High performance polymers**

6. A partial phase diagram and crystal solvate for the poly ( P- phenyleneterephthalamide ) sulfuric acid system	91
7. Aromatic azomethine polymers and fibers	103

**Elastomers and processability**

8. Silicone and fluorosilicone elastomers : structure and properties	117
9. Phosphazene elastomers : synthesis : properties and application	143
10. Curing of vinylidene fluoride based fluoroelastomers	159
11. Rubber processing through rheology	183

**Carbon fibers in polymers**

12. Mesophase formation in polynuclear aromatic compounds : a route to low cost carbon fibers	209
13. Pitch – solvent interactions and their effects on mesophase formation	219
14. Molecular weight determination and distribution in pitches	235
15. Solvent – extracted pitch precursors for carbon fiber	245
16. Effects of sulfur and metals on mesophase formation in coal liquid asphaltene and petroleum pitch	263

**Formation and modification of fibers**

17. Reaction of formaldehyde vapor with water – wetted wool	281
18. Accelerated UV and radiation – induced grafting of monomers to cellulose in the presence of additives : applications of these copolymers in art restoration and preservation	295
19. The mechanism of surface cavitation in polyethylene terephthalate fibers	309
20. Fluorenone polymers and fibers	325
21. Polyester processability in texturing as a function of spun yarn morphology	339
22. Effects of annealing below T <sub>g</sub> on the properties of poly (vinyl chloride )	345

**State of the art in fiber technology**

23. Modeling the melt spinning process	355
24. Design of tire cords : optimization of viscoelastic properties	371

25. Deformation profiles : effect on the properties of high density polyethylene drawn by solid – state extrusion	397
26. Tailoring polymer molecules for specific fiber and ribbon properties	415
