

CONTENTS

Thermal analysis of fibers and fiber lends part I. Differential thermal analysis	1
Thermal analysis of fibers and fiber – blends part II. Pyrolysis – gas chromatography	15
Applications of thermogravimetry to the study of high polymers	25
Thermomechanical properties of polymers by torsional braid analysis	45
Thermomechanical and thermal analysis of fiber – forming polymers	59
Thermoparticulate analysis	77
Melting behavior and melt enthalpy of polyethylene	85
Superheating of linear high polymers . polytetrafluoroethylene	101
On the kinetics of the glass transition	111
A thermal study of benzhydrylated cotton cellulose	121
Reaction of aryl isocyanates with cotton cellulose part III. Thermal behavior of product	133
The thermal degradation of starch part 5. A kinetic study of the major volatiles From potato starch and its components	149
The thermal degradation of starch. Part 6 the pyrolysis of amylo maize starch in the Presence of inorganic salts	159
Author index	175
Subject index	175
