<i>Preface</i>	xi

Part I Theoretical considerations

1	Fundamentals of electrochemistry	
	P. WESTBROEK	
1.1	Introduction	3
1.2	What is an electrochemical reaction?	4
1.3	Conventions for presentation of electrochemical data	8
1.4	Classification of electrochemical methods	9
1.5	Two-electrode setup	10
1.6	Three-electrode setup	13
1.7	Charge-transfer and transport phenomena	25
1.8	References	34
2	Electrochemical methods	37
	P. WESTBROEK	
2.1	Introduction	37
2.2	Potentiometry	37
2.3	Cyclic voltammetry	43
2.4	Impedance of electrochemical systems	50
2.5	Chronoamperometry	60
2.6	Other voltammetric methods	61
2.7	References	67

Part II	Electrochemistry in textile finishing	71
3	Probes for pH measurement and simultaneous cellulose removal and bleaching of textiles with enzymes P. WESTBROEK AND P. KIEKENS	73
3.1	Introduction	73
3.2	Ion-selective electrodes	73
3.3	Glass-membrane electrodes	75
3.4	Simultaneous cellulose removal and bleaching with enzymes	81
3.5	References	90
	Electrochemical behaviour of hydrogen peroxide oxidation: kinetics and mechanisms P. WESTBROEK AND P. KIEKENS	92
4.1	Introduction	92
4.2	Use of hydrogen peroxide in textile-bleaching processes	93
4.3	Determination methods of hydrogen peroxide	96
4.4	Voltammetric behaviour	97
4.5	Detection of high hydrogen peroxide concentrations with amperometric method	98
4.6	Theoretical I-E relationship for mechanism 1	112
4.7	Theoretical I-E relationship for mechanism 2	120
4.8	The pseudo-limiting-current	123
4.9	Combination of rate equations of both mechanisms	126
4.10	References	130
5	Amperometric detection of hydrogen peroxide in bleaching and washing processes P. WESTBROEK AND P. KIEKENS	133
5.1	Introduction	133
5.2	Influence of temperature	133
5.3	Behaviour of the sensor electrode at the laboratory scale	135
5.4	Behaviour of the sensor in an industrial environment	144
5.5	Expanding the sensor system for processes occurring at $\text{pH} < 10.5$	152
5.6	References	160
6	Simultaneous detection of indigo and sodium dithionite for control of dyeing processes P. WESTBROEK AND P. KIEKENS	161

6.1	Introduction	161
6.2	Basic electrochemical reactions of dithionite and sulphite	162
6.3	Kinetic limitations in oxidation of dithionite and sulphite	168
6.4	Mechanism of the charge-transfer kinetics of dithionite oxidation	174
6.5	Detection of sodium dithionite	183
6.6	Detection of indigo	184
6.7	Simultaneous detection of sodium dithionite, sulphite and indigo at a wall-jet electrode	185
6.8	References	196
7	Advantages of electrocatalytic reactions in textile applications: example – electrocatalytic oxidation of sodium dithionite at a phthalocyanine and porphyrin cobalt(II)-modified gold electrode P. WESTBROEK	198
7.1	Introduction	198
7.2	Electrodeposition of Co(II)TSPc at gold electrodes	199
7.3	Analysis of the data	204
7.4	Electrocatalysis with modified gold electrodes towards sodium dithionite	206
7.5	References	211
Part III	Textile electrodes	213
8	Intelligent/smart materials and textiles: an overview G. PRINIOTAKIS	215
8.1	Introduction	215
8.2	Smart materials	216
8.3	Intelligent/smart textiles	221
8.4	Electrotextiles	227
8.5	Intelligent clothing	236
8.6	References	239
9	Characterisation of electrochemical cell for textile electrode studies and quality control G. PRINIOTAKIS, P. WESTBROEK AND P. KIEKENS	244
9.1	Introduction	244
9.2	Characterisation of an electrochemical cell	244
9.3	Method for quality control of textile electrodes	254
