Introduction	13
1.1 Complexity of Compound Ingredient Selection	13
1.2 Industrial Complexity	15
1.3 Complexity of Ingredient Property Relationships	16
1.4 Experimental Ideas	19
1.5 Sources of Ideas	20
1.6 Review Panel	21
2 Improving the Physical Properties of Cured Rubber Compounds	23
2.1 Increasing Tensile Strength	23
2.2 Increasing High-temperature Tensile Strength	37
2.3 Increasing Ultimate Tensile Elongation	39
2.4 Increasing Hardness and Modulus	43
2.5 Reducing Set, Under Compression and/or Tension	55
2.6 Increasing Rebound and Decreasing Hysteresis	64
2.7 Increasing Tear Resistance	79
2.8 Increasing Hot Tear Resistance	89
2.9 Improving Low-temperature Properties	92
2.10 Increasing Electrical Conductivity	99
2.11 Increasing Thermal Conductivity	107
2.12 Decreasing Coefficient of Friction	109
2.13 Decreasing Air Permeability	111
2.14 Increasing Rubber-to-metal Adhesion	114
2.15 Improving Rubber-to-fabric Adhesion	119
2.16 Improving Flame Retardance	120
2.17 Reducing Compound Cost	124
3 Improving Degradation Resistance of Cured Rubber Compounds	133
3.1 Improving Hot Air and/or Heat Aging Resistance	133
3.2 Improving Ozone Resistance	150
3.3 Improving Flex Fatigue Resistance and/or Cutting and Chipping Resistance	160
3.4 Improving Abrasion and/or Wear Resistance	178
3.5 Improving Oil and/or Solvent Resistance	189
3.6 Improving Staining and Discoloration Resistance	198
3.7 Improving Weathering Resistance	200
3.8 Improving Hydrolysis Resistance	202

4	Optimizing Measurable Processability Properties	203
4.1	Reducing Viscosity	203
4.2	Increasing Shear Thinning	208
4.3	Reducing Elasticity (Nerve)	210
4.4	Increasing Tack	211
4.5	Reducing Stickiness to Metal Surfaces	217
4.6	Increasing Percent Dispersion of Carbon Black and Fillers	219
4.7	Increasing Green Strength	227
4.8	Increasing Scorch Safety Time	233
4.9	Increasing Cure Rate	243
4.10	Reducing Reversion	251
4.11	Reducing Marching Modulus	256
4.12	Reducing Cold Flow	257
5	Minimizing Adverse Processing Attributes	259
5.1	Reducing or Eliminating Porosity, Bubbles, or Voids in Both the Uncured and the Cured State	259
5.2	Mixing: Reducing Filler or Black Incorporation Times (BITs)	265
5.3	Mixing: Decrease Total Mixing Time	267
5.4	Mixing: Reducing or Eliminating Lumps in Dumped Batches	271
5.5	Mixing: Reducing Bagging on the Mill	272
5.6	Mixing: Reducing Back Rolling on the Mill	273
5.7	Extrusion: Reducing Die Swell (Improving Dimensional Stability)	274
5.8	Extrusion: Improving Smoothness of the Extrudate Surface ..	280
5.9	Extrusion: Increasing Extrusion Rate Without Loss of Quality	286
5.10	Calendering: Eliminating Blisters	291
5.11	Calendering: Improving Calender Release	293
5.12	Raw Material and Mixed Stock Bin Storage: Lengthening Useful Shelf Life	294
5.13	Mixed Stock Bin Storage: Reducing Bloom	295
5.14	Compression/Transfer/Injection Molding: Improving Mold Release	299
5.15	Compression/Transfer/Injection Molding: Reducing or Eliminating Mold Fouling	300
5.16	Compression/Transfer/Injection Molding: Improving Mold Flow	305
5.17	Compression/Transfer/Injection Molding: Reducing Shrinkage of Part	306
5.18	Compression/Transfer/Injection Molding: Improving Surface Appearance	309
5.19	Increasing the Blow Rate During the Curing of a Sponge Compound	310

5.20 Eliminating trapped Air During Molding	313
5.21 Reducing Backrinding	315
6 Tire Performance Properties	317
6.1 Improving Tire Wet Traction	317
6.2 Improving Tire Dry Traction	322
6.3 Improving Tire Winter Traction or Ice Traction	324
6.4 Improving Tire Rolling Resistance	326
Appendix 1: Blends	335
A.1 Introduction	335
A.1.1 SBR/NR Blends	338
A.1.2 SBR/IR Blends	341
A.1.3 SBR/BR Blends	341
A.1.4 NR/BR Blend	343
A.1.5 NR/IR Blends	345
A.1.6 NR/CIIR Blends	345
A.1.7 NR/BIIR Blends	346
A.1.8 NR/BIMS Blends	346
A.1.9 NR/IIR Blends	347
A.1.10 CR/IIR Blends	347
A.1.11 NBR/SBR Blends	347
A.1.12 NBR/PVC Blends	348
A.1.13 XNBR/PVC Blend	349
A.1.14 NBR/IR Blends	350
A.1.15 NBR/BR Blends	350
A.1.16 NBR/NR Blends	351
A.1.17 EPDM/SBR Blends	351
A.1.18 EPDM/CR Blends	351
A.1.19 EPDM/IR Blends	352
A.1.20 EPDM/NR Blends	352
A.1.21 EPDM/CSM Blends	352
A.1.22 EPDM/Silicone Compatibilized	353
A.1.23 EPDM/LDPE Blend	353
A.1.24 EPDM/EVA Blend	353
A.1.25 CR/SBR Blends	353
A.1.26 CR/BR Blends	354
A.1.27 CSM/BR Blends	355
A.1.28 CR/Hydrin Blends	355
A.1.29 NBR/FA Polysulfide Rubber	355
A.1.30 Triblend	355
A.1.31 Four-way Blends	359

Appendix 2: Cure Systems	361
A.2 Introduction	361
A.2.1 General Purpose Elastomer Cure Packages	361
A.2.2 EPDM Cure Packages	364
A.2.3 NBR Cure Packages	366
A.2.4 Polychloroprene Cure Packages	369
A.2.5 Chlorobutyl Rubber Cure Packages	374
A.2.6 Butyl Rubber Cure Packages	377
Review Panel Members' Biographies	379
Author's Biography	389
Index	391
