

Contents

1	Introduction	5
1.1	Polymerisation and molecular architecture	5
1.1.1	Natural rubber	5
1.1.2	Styrene-butadiene copolymer	5
1.1.3	Polybutadiene	8
1.1.4	Nitrile rubber	9
1.1.5	Ethylene-propylene terpolymer	10
1.1.6	Polyethylacrylate	10
1.1.7	Polydimethyl siloxane	11
1.1.8	Masterbatches	11
1.2	What is rubber?	11
1.3	Formulation	14
1.4	Mixing equipment	15
2	Mill Processability	23
2.1	Mastication and mill processability	23
2.2	Interpretation of mill processability	25
2.3	Science of mill processability	27
3	Overview of Mixing of Rubber	33
3.1	Unit processes	33
3.2	Interpretation of the mixing process	35
3.3	Compaction as a part of the mechanism in incorporating carbon black into an elastomer	42

Science and Practice of Rubber Mixing

3.3.1	Introduction	42
3.3.2	Experiment-I	42
3.3.3	Results-I	44
3.3.4	Discussion-I	51
3.3.5	Experiment-II	55
3.3.6	Results-II	56
3.3.7	Discussion-II	68
4	Viscoelasticity and Fracture	71
4.1	Introduction to viscoelasticity	71
4.2	Viscoelasticity for characterisation	77
4.3	Viscoelastic behaviour of rubber in an internal mixer	78
4.4	Mechanism of fracture of gum rubber	81
5	Characterisation of Gum Rubber Using Dilute Solution Methods	87
5.1	Introduction	87
5.2	Gel determination	90
5.3	Dilute solution method	92
5.4	Relationship between dilute solution properties and processability ...	100
6	Viscoelastic Characterisation of Gum Rubber	103
6.1	Introduction	103
6.2	Methods of describing deformation	103
6.3	Non-linear viscoelasticity	106
6.4	Conventional methods of characterisation	110
6.5	Characterisation based on viscoelasticity	113
6.6	Processability and molecular structure	126
6.7	Processability and viscoelastic characteristics	128

6.7.1	<i>Cis</i> -1,4-polybutadiene	128
6.7.2	Polyethylacrylate	165
6.8	Linear viscoelasticity	175
6.8.1	Linear viscoelasticity and mixing of rubber	176
6.8.2	Relaxation time and its distribution	176
6.8.3	Linear viscoelasticity as a conceptual background for the mixing of rubber	180
6.8.4	Viscoelasticity and memory	181
7	Viscoelastic Characterisation of Rubber Compounds	189
7.1	Introduction	189
7.2	Viscoelastic properties of compounds	189
7.3	Strain- and strain-rate amplification	198
7.4	Unique characteristics of compounds	207
7.5	Application of characterisation methods for a specific problem	208
7.5.1	Effect of fillers and rubber structures on tensile behaviour of filled, unvulcanised compounds of <i>cis</i> -1,4-polybutadiene	208
8	Rheology of Gum Rubber and Compound	227
8.1	Rheometry	227
8.2	Slip	236
8.3	Extrudate shrinkage	238
8.4	Yielding	243
8.5	Effect of concentration and structure of carbon black	246
8.5.1	Hydrodynamic theories	246
8.5.2	Concentration dependence	248
9	Reinforcing Fillers and Liquid Additives	251

Science and Practice of Rubber Mixing

9.1	Reinforcing fillers	251
9.1.1	Introduction	251
9.1.2	Mixing ease of fillers	251
9.1.3	Structure of aggregate and agglomerate	259
9.2	Liquid additives	269
10	The Energy Aspects of Mixing Rubber	273
10.1	Introduction	273
10.2	Energy balance	273
10.2.1	Experiment	274
10.2.2	Experimental programme	275
10.2.3	Results	277
10.2.4	Summary	288
11	Mixing Mechanisms	291
11.1	Introduction	291
11.2	Problems associated with internal mixers	291
11.3	Approach to simulation	293
11.4	Proposed model of a mixing mechanism	294
11.4.1	Changes in material during mixing	294
11.4.2	Mechanical actions	296
11.4.3	Material-machine interaction	299
11.4.4	Macroscopic versus microscopic deformation	300
11.5	Modelling of the fracture of rubber particles	301
11.5.1	Material	301
11.5.2	Dynamic state of the elastomer	302
11.5.3	Basic mixing model	303
11.5.4	Model of unit processes	304
11.6	Model of material behaviour in the internal mixer	306

11.6.1	Material properties	306
11.6.2	Pressure profile in the internal mixer	307
11.6.3	Deformation of material between rotor edge and chamber wall	307
11.6.4	Probability and distribution in mixing	308
11.6.5	Calculation of mixing energy	308
11.7	Discussion	310
11.8	Nano and molecular scale of mixing	313
11.9	Chemical reactions during mixing	318
11.10	Optimisation of operation and improvements of mixers	319
11.10.1	Introduction	319
11.10.2	Optimum state of the elastomer for mixing	321
11.10.3	Improvements in rotor design	322
12	Post-Mixing Processes	331
12.1	Introduction	331
12.2	Extrusion	331
12.2.1	Causes of non-uniformity in feeding	331
12.2.2	Material behaviour in the screw	333
12.2.3	Flow mechanisms in the extruder	336
12.2.4	Homogenisation devices before the die entrance and after the exit	339
12.3	Mixing and extrusion of high silica and all silica-natural rubber compounds	340
12.3.1	Introduction	340
12.3.2	Samples	341
12.3.3	Mixer and mixing conditions	342
12.3.4	Extruder and extrusion test	343
12.3.5	Results and discussion	344
12.4	Injection moulding	356

Science and Practice of Rubber Mixing

12.4.1 Introduction	356
12.4.2 Flow mechanisms	356
13 Material Testing, Quality Control and Process Control	365
13.1 Introduction	365
13.2 Material testing	365
13.3 Test for the uniformity of gum rubber	367
13.4 Mooney relaxation curve	371
13.5 Testing for uniformity of compound	372
13.6 Process control	373
14 Mixing of Rubber without using a Mill or Internal Mixer	379
14.1 Masterbatch	379
14.2 Continuous mixing	380
14.3 Handling of new material	385
