

# TABLE OF CONTENTS

	<u>Page</u>
<b>1. <u>INTRODUCTION</u></b>	
▪ What is natural rubber ?	1
▪ Synthetic <b>vis-à-vis</b> natural rubber	1
▪ Value of rubber to man	2
▪ Short <b>Survey</b> of economic position of natural rubber in world markets	2
<b>2. <u>HISTORY</u></b>	
▪ <b>Discovery</b> in South America; early <b>French work</b>	9
▪ Discovery of vulcanization	9
▪ Establishment of plantations	9
▪ Developments in the twentieth century	10
<b>3. <u>CCMPOSITION AND STRUCTURE OF RUBBER AND LATEX</u></b>	
▪ Composition of raw rubber and structure of the hydrocarbon	12
▪ Non-rubber components of raw rubber (9)	14
▪ Composition of latex (9)	14
▪ Yellow pigment, IW globules and lutoids (10;29)	15
▪ Preservation	20
▪ Sanitation	21
▪ Transportation (30)	22
<b>4. <u>MANUFACTURE OF SHEET RUBBER</u></b>	
▪ Introduction	24
▪ Latex handling; straining of latex, bulking of latex	24
▪ Coagulating tanks	25
▪ Directions for standardizing latex	25
▪ Converting factors	27
▪ Coagulation	28
▪ Handling of <b>coagulum</b> and cleaning of coagulating tanks	29
▪ Milling of sheet rubber — sheeting batteries	29
▪ Layout of sheeting factories	31
▪ Smoking and smokehouses	34
▪ Operation of tunnel-type smokehouses	43
▪ Smokehouse fires	45
▪ Firewood for smokehouses	45
▪ Woods drying tunnel	46
▪ Type descriptions for RSS rubber grades	47
▪ Baling and packing	47
▪ Inspection of sheet rubber	47
▪ Packing specifications for <b>RSS</b>	47
▪ Various types of baling presses	48
<b>5. <u>MANUFACTURE OF AIR DRIED SHEET</u></b>	
▪ Introduction	50
▪ Method of manufacture	50
▪ Coagulation	50
▪ Sheeting, drying and packing	51
▪ Defects of air dried sheet	51
▪ Colour; mould	51
▪ Dirt and foreign matter	52
▪ Cost of production	52

	<u>Page</u>
6. <u>MANUFACTURE OF CREPE RUBBER</u>	
▪ Introduction	53
▪ Preservation	53
▪ Coagulation	53
▪ Crepeing <b>batteries</b>	54
▪ Installation and maintenance	57
▪ Safety precautions	57
▪ Crepeing mills	58
▪ Fractional coagulation	59
▪ Lower grade crepes	59
▪ Drying of crepe.	61
▪ Type descriptions for crepe rubber <b>grades</b>	62
▪ Packing specifications	62
▪ International rubber samples	62
7. <u>MANUFACTURE OF LATEX CONCENTRATE</u>	
▪ Introduction	63
▪ Field preservation	65
▪ Layout of a centrifuge factory	65
▪ Reception at factory and flowline	66
▪ Concentration by centrifuging	66
▪ Setting and operation of machines	69
▪ Sludge formation <b>and</b> removal	70
▪ Driving power	71
▪ Upkeep of machines	72
▪ <b>Ammoniation</b>	72
▪ Preaervative systems	72
▪ Storage	73
▪ Testing labotatory	73
▪ Quality standards	73
▪ Sampling and methods of testing for latex concentrate	76
8. <u>PROCESSING OF SKM LATEX AND SKIM RUBBER</u>	
▪ Introduction	77
▪ Precautions	77
▪ Processing	78
▪ The trypsin process	78
▪ The Firestone process	79
9. <u>MANUFACTURE OF BLOCK RUBBERS</u>	
▪ Introduction	83
▪ Advantages of new <b>forms</b> of rubber	83
▪ Technical specifications	83
▪ Production of block <b>rubbers</b>	90
▪ <b>Selection</b> of processing methods	91
▪ The Heveacrub process	91
▪ <b>Dynat</b> rubber	96
▪ The Decan process	100
▪ The Grana <b>process</b>	100
▪ The Decan <b>remill</b> process	101
▪ Extrusion drying	104
▪ Assisted Biological Process ▪ <b>ABC</b> Rubber	105

10. SPECIALITY RUBBERS

- Viscosity-stabilized rubbers
- Superior processing rubber
- lyre rubber

107  
108  
110

11. TESTING OF BLOCK RUBBERS

- Testing station
- Sampling and Testing Methods

111  
111

12. SHIPMENT OF BLOCK RUBBER

123
