

## CONTENTS

<b>Chapter 1</b>	<b>THE HISTORICAL DEVELOPMENT OF RUBBER CHEMISTRY</b>	
1.1	Induction	1
1.2	Early Years	2
1.3	Synthetic Rubber	3
1.4	Hot and Cold War: Hot and Cold Rubber	6
1.5	Stereo and Speciality Rubbers	7
1.6	Reactivity of Rubbers	9
1.7	Future Trends	10
<b>Chapter 2</b>	<b>THE CHEMICAL NATURE OF THE NATURAL RUBBER MOLECULE</b>	
2.1	Introduction	11
2.2	The Chemical Formula of Natural Rubber	11
2.3	Molecular Weight and the Molecular Weight Distribution	16
2.4	Minor Groupings and Microgel	19
2.5	End-groups	22
2.6	The Protein Effect	22
<b>Chapter 3</b>	<b>THE MOLECULAR NATURE OF RUBBER ELASTICITY</b>	
3.1	Introduction	25
3.2	Molecular Dimensions	25
3.3	Elasticity of a Single Chain	32
3.4	Elasticity of a Network	34
3.5	Non-Gaussian Networks	41
3.6	Alternative Relationships	45
3.7	Thermodynamic Aspects	52
3.8	Conclusions	58
<b>Chapter 4</b>	<b>STRUCTURE-PROPERTY RELATIONSHIPS IN RUBBERS</b>	
4.1	Basic Considerations	66
4.2	Non-rubbery Properties	70
4.3	Structure and Processing Properties	93
4.4	Strength of Rubbers	99

<b>Chapter 5</b>	<b>DIENE HOMOPOLYMER RUBBERS</b>	
5.1	Introduction	106
5.2	Preparation of Monomers	106
5.3	Isomerism in Diene Rubbers	111
5.4	Characterization of Microstructure	114
5.5	Polymerization of Dienes	119
5.6	Structure and Properties of Diene Rubber	128
<b>Chapter 6</b>	<b>DIENE-BASED COPOLYMERS</b>	
6.1	Introduction	135
6.2	Copolymer Structure – General Considerations	135
6.3	Styrene-Butadiene Rubber	138
6.4	Nitrile Rubbers	149
6.5	Vinyl Pyridine Rubbers	158
6.6	Butadiene-Methyl Isopropenyl Ketone Rubbers	158
6.7	Alternating Olefin-Diolefin Copolymers	158
<b>Chapter 7</b>	<b>REACTIVITY OF DIENE RUBBERS – I</b>	
7.1	General Considerations	161
7.2	Reactivity of Alkenes	162
7.3	Hydrogenation	166
7.4	Hydrohalogenation I	170
7.5	Halogenation	172
7.6	Cis-Trans-Isomerization	175
7.7	Cyclized Rubber	180
7.8	Maleic Derivatives	185
7.9	Epoxidized, Hydroxy-esterified and Hydroxy-halogenated Diene Polymers	187
7.10	‘Ene’ and 1,3-Dipolar Reactions	188
7.11	Conclusions	191
<b>Chapter 8</b>	<b>REACTIVITY OF DIENE RUBBERS – II: CROSS-LINKING PROCESSES</b>	
8.1	Introduction	194
8.2	Accelerated Sulphur Vulcanization	198
8.3	Vulcanization by Sulphur-containing Compounds	244
8.4	Vulcanization without Sulphur or Sulphur Compounds	247

<b>Chapter 9</b>	<b>REACTIVITY OF DIENE RUBBERS – III: OXIDATION AND RELATED PROCESSES</b>	
9.1	Introduction	260
9.2	Oxidation of Saturated and Unsaturated Hydrocarbons	261
9.3	Oxidation of Sulphides and Olefin-Sulphide Systems	268
9.4	Oxidation of Diene Rubber Network Structures	270
9.5	Protection against Oxidation	279
9.6	Mastication, Oxidation and Mechanochemistry	283
9.7	Reaction of Ozone with Diene Rubbers	286
<b>Chapter 10</b>	<b>POLYCHLOROPRENE</b>	
10.1	Introduction	295
10.2	Monomer Preparation and Properties	295
10.3	Polymerization	297
10.4	Polymer Structure	299
10.5	Vulcanization	302
10.6	Oxidation and Ageing	306
10.7	Technological Comparison of Polychloroprenes	307
<b>Chapter 11</b>	<b>POLYISOBUTENE AND BUTYL RUBBER</b>	
11.1	Introduction	309
11.2	Polymerization Chemistry and Manufacture	310
11.3	Structure of Polyisobutene and Butyl Rubber	311
11.4	Halogenation of Butyl Rubber	312
11.5	Identification and Characterization	314
11.6	Cross-linking of Butyl	315
11.7	Miscellaneous Butyl-type Rubbers	321
<b>Chapter 12</b>	<b>RUBBERS BASED ON ETHYLENE</b>	
12.1	Introduction	323
12.2	Ethylene-Copolymers Rubbers	324
12.3	Rubbery Copolymers of Ethylene with Polar Monomers	340
12.4	Chlorinated and Chlorosulphonated Polymers	342
<b>Chapter 13</b>	<b>FLUORINE-CONTAINING RUBBERS</b>	
13.1	Introduction	349
13.2	Early Developments	350
13.3	Copolymers Containing Vinylidene Fluoride	351
13.4	Copolymers Containing Perfluoro (Methyl Vinyl Ether)	358
13.5	Nitroso-fluoroelastomers	360

13.6	Phosphonitrile Fluoroelastomers	363
13.7	Perfluoroalkylenetriazine Elastomers	364
13.8	Poly (Thiocarbonyl Fluoride) and Related Elastomers	365
13.9	Miscellaneous Fluoroelastomers	366
<b>Chapter 14 ACRYLIC RUBBERS</b>		
14.1	Introduction	368
14.2	General Polymerization Chemistry of Acrylic Rubbers	369
14.3	The Development of Oil-resistant Rubbers with Low Brittle Point	370
14.4	Reactive Cure Sites	372
14.5	Curing Systems	374
14.6	Ageing of Acrylic Rubbers	376
14.7	Polyvinyl Ether Elastomers	376
<b>Chapter 15 RUBBERS PRODUCED BY CONDENSATION AND RING-OPENING POLYMERIZATION MECHANISMS</b>		
15.1	Introduction	379
15.2	Polyesters and Polyester-amides	381
15.3	Polyamides	384
15.4	Polyethers and Polythioethers	385
15.5	Polysulphides	390
15.6	The Silicones	396
15.7	Polyalkenamers	406
15.8	Polynorbornene	410
<b>Chapter 16 POLYURETHANE RUBBERS</b>		
16.1	Introduction	414
16.2	Intermediates, Structure and Properties	419
16.3	Crosslinking and Physical properties	422
16.4	Cast Polyurethane Rubbers	425
16.5	Milable Gums	428
16.6	Cellular Polyurethanes	429
16.7	Thermoplastic Polyurethanes	430
16.8	Toxicity Hazards in Polyurethane Technology	430
<b>Chapter 17 THERMOPLASTIC RUBBERS</b>		
17.1	Introduction	432
17.2	Block Copolymers	433
17.3	Survey of Industrial Block Copolymer Thermoplastics Rubbers	438
	Index	453
