

CONTENTS

**Part I. General**

1. Introduction	1
2. Standard designs and tolerances for limit gauges	1
3. General requirements	1
4. Examination and measurement in the workshop	2
5. Thermal expansion	3
6. Measurement of hardness	4
7. Care and maintenance of measuring tools	4

**Part II. Gauge making**

8. Selection of steel	5
9. Machining the blanks	5
10. Hardening	7
11. Stabilizing	12
12. Grinding	14
13. Special workshop methods	18

**Part III. General measuring apparatus**

14. Slip gauges	32
15. Workshop length – bars	33
16. Roller gauges and steel balls	33
17. Micrometers	34
18. Dial and indicator gauges	36
19. Bench micrometers	38
20. Vertical comparators	38
21. Internal comparators	40
22. Optical projectors	42
23. Other measuring tools	45
24. Using light in measurement	49

**Part IV. Special apparatus and methods of measurement**

25. Plain ring gauges	51
26. Gap gauges	54
27. Depth gauges	55
28. Taper plug gauges	57
29. Taper ring gauges	66
30. Angle gauges	68
31. Profile gauges	73
<b>References</b>	79

## **Appendices**

I. Tables for use in taper measurements	80
II. Technical publications of interest to gauge makers ( Including british standard specifications)	82
Index	84
