

CONTENTS

1. Catalysis and long – range electron transfer by quinoproteins	1
2. Microbiosensors for food analysis	10
3. Biosensors for food analysis	26
4. Metalloporphyrin – coated electrodes for detection of 2,4 – D	41
5. Intact chemoreceptor – based biosensors : antennular receptors	48
6. Immuno-electrodes for the detection of bacteria	59
7. Drug detection using the flow immunosensor	73
8. A conductive polymer – based immunosensor for the analysis of pesticide residues	81
9. Application of capacitive affinity biosensors : HIV antibody and glucose detection	89
10. Characterization of fluorescent dyes for optical immunosensors based on fluorescence energy transfer	105
11. Concanavalin a and polysaccharide on gold surfaces : study using surface Plasmon resonance techniques	121
12. Noninvasive determination of moisture and oil content of wheat – flour cookies : near - infrared spectroscopy in the wavelength range 700 – 1100 nm	137
13. Fiber – optic biosensors based on total internal – reflection fluorescence	165
14. Needs for biosensors in space – biology research	174
15. Mountaineering in research and development	184
