

CONTENTS

1. Earthquake effects as natural hazards on structures	3
2. Strong winds and cyclones as natural hazards	139
3. Materials and structural components resisting natural hazards	261
4. new horizon in earthquake resistance analysis and design of structures	385
5. Geotechnical aspects of natural hazards	527
6. Flood protection and control	683
7. Modelling , mitigation and control of natural hazards	797
