

CONTENTS

1. Introduction	1
2. Air – Conditioning systems	10
3. Moist air properties and conditioning process	49
4. Comfort and health – indoor environmental quality	89
5. Heat transmission in building structures	124
6. Solar radiation	169
7. Space heating load	191
8. The cooling load	215
9. Energy calculations	280
10. Flow , pumps and piping design	297
11. Space air diffusion	362
12. Fans and building air distribution	394
13. Direct contact heat and mass transfer	463
14. Extended surface heat exchangers	484
15. Refrigeration	532
Appendix 1 Thermophysical properties	585
Appendix 2. Weather data	598
Appendix 3. Pipe and tube data	607
Appendix 4. Useful data	610
Index	613
