1 Introduction: Structure in Design of Architecture

C I I		
SECTION 5	Summary	18
SECTION 4	Structure and Other Subsystems	13
SECTION 3	An Overall Approach to Structural Education	11
SECTION 2	The Architectural Design Process	6
SECTION 1	Overall Thinking	3

2 Schematic Building Forms as Total Structural Systems

SECTION 1	The Assumption of Integrity	21
SECTION 2	Estimating Overall Forces on Building Forms	27
SECTION 3	Aspect Ratios and Overturn Resistance	32
SECTION 4	Strength and Stiffness of Buildings	39
SECTION 5	Symmetry and Asymmetry in Building Forms	49

3 Overall Integrity and Major Subsystem Interaction Requirements

Schematic	c Analysis of Buildings as Total Structural	80
SECTION 4	Space-Structures of Columns and Frames	80
SECTION 3	Building Forms Conceived as Space-Structures	71
SECTION 2	Building Forms Conceived as Solid Structures	57
SECTION 1	The Hierarchy of Structural Action in Building Forms	53

SECTION 1	Space-Organizing Components as Major Structural	99
	Subsystems	
SECTION 2	Overall versus Local Issues of Total-System Analysis	102
SECTION 3	A Single-Story Open-Space Building	
	Example 4-1	111
SECTION 4	A Two-Story Parking Garage	
	Example 4-2	116
SECTION 5	A 12-Story Office Building	
	Example 4-3	120
SECTION 6	A 15-Story Apartment Mega-Structure	
	Example 4-4	124
	-	

5 Structural Loads and Responses

	420
SECTION 2 Dead Loads	130
SECTION 3 Live Loads	134
SECTION 4 Wind Loads	139
SECTION 5 Earthquake Loads	143
SECTION 6 Internal and External Movements in Structures	147
SECTION 7 Response of Structures	148
SECTION 8 Building Codes, Structural Behavior and Strength	151

6 Overall Design of Horizontal Subsystems

SECTION 1	Introduction	157
SECTION 2	Overall Structural Behavior of Horizontal Subsystems	158
SECTION 3	Flat-Plate Subsystems	171
	Example 6-1: Prestressed Concrete Flat Slab	173
SECTION 4	Slab-and-Beam Subsystems	176
	Example 6-2A	180
	Example 6-2B	181
SECTION 5	Joist and Girder Subsystems	183
	Example 6-3	189
SECTION 6	Waffle Subsystems	191
	Example 6-4: Waffle System	194
SECTION 7	Space Truss Systems	196
	Example 6-5: Steel Space Truss System	199

7 Overall Design of Vertical Subsystems

SECTION 2 Wall Subsystems	208
Example 7-1: Design of a Shear Wall	212
Example 7-2: Design of a Trussed Shear Wall	214
SECTION 3 Shafts	215
Example 7-3: Design of a Tube Subsystem	219
SECTION 4 Rigid-Frame Subsystems Under Vertical	221
Loads	
SECTION 5 Rigid-Frame Subsystems Under Horizontal	223
Loads	
Portal Method	224
Cantilever Method	229
Example 7-4: Rigid Frame Analysis	230
SECTION 6 Approximate Lateral Deflections of Vertical Elements	232
Example 7-5: Transverse Deflection	236

8 Horizontal Linear Components

CECTION 4	Continual Change and Drepartions of	242
SECTION 1	Sectional Shapes and Proportions of	243
	Components	
SECTION 2	Moment Diagrams	248
SECTION 3	Internal Resisting Couple	257
SECTION 4	Designing with Allowable and Ultimate Stresses	267
SECTION 5	Deflections	268
SECTION 6	Prestressing; Load Balancing	272
	Example 8-1	275
	Example 8-2	279
	Example 8-3	280
SECTION 7	Horizontal Shear Flow in Beams	281
SECTION 8	Design Examples	283
	Example 8-4	284
	Example 8-5	286
	Example 8-6	288
	Conclusion	292
SECTION 9	Connections for Horizontal Components	292
SECTION 10	Trusses	299

9 Vertical Linear Components

CECTION 4	The state of Tanada and Adamshi and	207
SECTION T	lies, Hangers, and Tension Members	30/
SECTION 2	Short Columns—Axially Loaded	310
1	Example 9-1: Column Design	313
SECTION 3	Long Columns—Axially Loaded	314
	Example 9-2: Design of Slender Steel Columns	322
SECTION 4	Columns Under Bending—Steel	322
	Example 9-3: Design of Steel Columns Under	324
	Bending	
SECTION 5	Columns Under Bending-Concrete	326
	Example 9-4: Design of Concrete Columns Under	327
	Bending	
	Example 9-5: Design of Concrete Columns Under	328
	Bending	
SECTION 6	Example for Seismic Design of Columns	329
	Example 9-6: Concrete Column	329
	Example 9-7: Steel Column	331
	•	

10 High-Rise Buildings

SECTION 1	Introduction	335
SECTION 2	Shear-Wall Systems	340
	Example 10-1	342
SECTION 3	Rigid-Frame Systems	344

		Example 10-2	345
	SECTION 4	Tubular Systems	346
		Example 10-3: A Round Building	350
		Example 10-4: Sears-Roebuck Building, Chicago	354
	SECTION 5	Special Systems	355
	SECTION 6	Floor Systems	365
	SECTION 7	Deflections and Vibrations and Ductility	369
	SECTION 8	Weight of Structural Materials	373
11	Arch, Sus	pension, and Shell Systems	
	SECTION 1	Introduction	377
	SECTION 2	Arch Systems	378
		Example 11-1: Design of an Arch	384
	SECTION 3	Suspension Systems	385
		Example 11-2: Design of a Suspension Subsystem	391
		Example 11-3: Design of a Cable Stayed Roof	391
		Subsystem	
	SECTION 4	Folded-Plate and Cylindrical Shells	392
		Example 11-4: Design of the Hippodromo Cantilevers	396
	SECTION 5	Dome Shells	397
		Example 11-5: The Jakarta Dome Ring Beam	408
	SECTION 6	Dishes	409
		Example 11-6: Design of a Dish	413
	SECTION 7	Hyperbolic Paraboloid	414
		Example 11-7: Design of an HP Roof	421
	SECTION 8	Lightweight Tension Systems	424

12 Foundation Subsystems

SECTION 1	Introduction	429
SECTION 2	Line Footings and Mat Foundations	432
SECTION 3	Spread and Combined Footings	435
	Example 12-1: Design of a Column Footing	436
SECTION 4	Pile and Caisson Foundations	439
	Example 12-2	441
SECTION 5	Retaining Walls and Coffer Dams	446
	Example 12-3: Retaining Wall Design	447

13 Construction

SECTION 1	Introduction	455
SECTION 2	Steel Construction	456
SECTION 3	In-Place Concrete Construction	468
SECTION 4	Precast Concrete Construction	476

14 The Cost of Building Structures

SECTION 1	Introduction	487
SECTION 2	Percentage Estimates	489
SECTION 3	Square-Foot Estimating	491
SECTION 4	Volume-Based Estimates	493
SECTION 5	Some Generalizations About the Variables of Cost	496
SECTION 6	Economics of Long-Span Roof Systems	499
