

CONTENTS

Editorial Preface	7
Biographical notes	13
Foreword	15
Introduction	19
The thickness of a layer of liquid remaining after draining from a vertical wall or Coated on a moving support	21
Theory of coating a viscous liquid on a moving support	25
Theory of coating a plastic-viscous liquid on a moving support	39
SUPPLEMENT I	
The thickness of a layer remaining on the surface of a wire withdrawn vertically from A liquid or remaining on the Walls of a capillary	46
SUPPLEMENT II	
The thickness of a liquid layer retained because of its limiting shear stress in a Quasi-equilibrium with the capillary meniscus	48
Confirmation of the theory of coating for a viscous liquid and problems of its Application in the coating of motion-Picture films	53
Testing the theory of coating and its practical application to the manufacture of Motion-Picture photographic materials	63
Introduction	63
Confirmation of the coating Equation	65
Features in the application of the Coating Equation for Technological Purposes	68
Temperature Control in coating	73
Some Other technological Features of Coating	82
Production Testing of the Coating Theory	82
Some physico-chemical Properties of gelatin and Photographic emulsions determining the Conditions of coating	87
Molecular structure of gelatin	87
Methods of measuring the viscosity and the limiting shear stress	92
Methods of measuring surface tension	96
Changes in the viscosity of Gelatin solutions with certain physico-chemical and Technological factors	99
Studies of the replacement of gelatin in Photographic Emulsions by High-molecular Weight substances	112
Technological Calculations of the coating Process in Production Practice	127
General Considerations	127
A Method of calculating the behaviour of the Coating process	127

Solutions of some Technological Problems on the basis of the coating Theory	133
Calculation of Tolerances in Measuring Viscosity	133
Calculation of Tolerances in Temperature measurements	134
Calculation of Tolerances of the emulsion level in the coating hopper	134
Wetting in the coating of photographic emulsions on flexible supports	137
Introduction	137
A Study of kinetic Wetting	140
General Theory of Kinetic Wetting	143
The Effect of Dynamic Surface Tension	151
The kinetics of Adsorption at the solution-air interface	155
Chemical Properties and Structure of wetting agents suitable for the coating of Photographic emulsions	159
A Study of the Wetting Action o Surface-active Substances(wetting agents) during the Coating of Photographic Emulsions	164
1. Effect of Wetting Agents on the Static Boundary Angle of Wetting	164
2. surface Tension of Aqueous and Gelatin solutions of wetting Agents and their Adsorption	165
3. Effect of the structure of Wetting Agents on Kinetic Wetting	176
4. Anticommet Action and Structure of Wetting Agents	183
