

## Contents

<i>Acknowledgements</i> .....	v
<i>Preface</i> .....	vii
Chapter 1 The Evolution of Earth–The Geochemical Partner of the Global Ecosystem (5 Billion Years of History) .....	1
Chapter 2 Basic Chemistry of the Ecosystem .....	35
Chapter 3 Energy, Order and Disorder, and Organised Systems .....	77
Chapter 4 Outline of Biological Chemical Principles: Components, Pathways and Controls .....	125
Chapter 5 First Steps in Evolution of Prokaryotes: Anaerobic Chemotypes Four to Three Billion Years Ago .....	193
Chapter 6 The Evolution of Protoaerobic and Aerobic Prokaryote Chemotypes (Three to Two Billion Years Ago) .....	239
Chapter 7 Unicellular Eukaryotes Chemotypes (About One and a Half Billion Years Ago?) .....	277
Chapter 8 Multi-Cellular Eukaryote Chemotypes (From One Billion Years Ago) .....	315
Chapter 9 The Evolution of Chemotypes with Nerves and a Brain (0.5 Billion Years Ago to Today) .....	365
Chapter 10 Evolution due to Mankind: A Completely Novel Chemotype (Less than One Hundred Thousand Years Ago) .....	393
Chapter 11 Conclusion: The Inevitable Factors in Evolution .....	415
<i>Index</i> .....	465
