<i>Series Editor's Preface</i>	<i>xxi</i>

SECTION I: INTRODUCTION

1. Introduction	3
John M. Chalmers and Robert J. Meier	
1. The Analytical Competence	3
2. Contents and Structure	6
3. Practical Considerations in the Multi-Technique Approach	11
References	12
2. Polymer Chemistry and Microstructure	13
Jacques Devaux and Sophie Demoustier-Champagne	
1. Introduction	14
2. Polymer: Definitions	15
3. From Molecules to Macromolecules	25
4. Fundamentals of Polymer Chemistry	34
5. Polymer Degradation	58
6. Summary	62
References	62
3. Polymeric Materials: Composition, Uses and Applications	65
J.P. Candlin	
1. Introduction	65
2. Mode of Polymerisation	66
3. Polymer Materials: Types and Forms	68
4. Polymer Additives	87
5. Summary	117
Bibliography	118

SECTION II: POLYMER CHAIN ANALYSIS

4. Chain Structure Characterization	123
Gregory Beaucage and Amit S. Kulkarni	
1. Introduction to Structure in Synthetic Macromolecules	123
2. Local Structure and Its Ramifications	134
3. Summary	165
References	166
5. Chain End Characterisation	171
Anthony T. Jackson and Duncan F. Robertson	
1. Introduction	171
2. End Groups in Free Radical Polymers	175
3. End Groups in Condensation Polymers	182
4. End Groups in Polymers from Ionic Polymerisation	194
5. Closing Remarks	201
Acknowledgements	201
References	201
6. Determination of Molecular Weights and Their Distributions	205
Simone Wiegand and Werner Köhler	
1. Introduction	205
2. Distribution Functions and Averages	208
3. Methods Based on Colligative Properties	212
4. Viscometry	218
5. Scattering Techniques	220
6. Liquid Chromatography	228
7. Analytical Ultracentrifuge	235
8. Other Methods	237
9. Practical Examples	241
10. Conclusion	247
Acknowledgements	248
References	248

SECTION III: POLYMER MORPHOLOGY AND STRUCTURE

7. Phase Structure and Morphology	255
Rufina G. Alamo	
1. Phase Structure and Morphology	255
2. Supermolecular Morphology	274

3. Concluding Remarks	286
Acknowledgements	287
References	287
8. Characterization of Molecular Orientation	295
Thierry Lefèvre, Christian Pellerin and Michel Pézolet	
1. Introduction	295
2. Theory	297
3. Birefringence	301
4. Infrared Linear Dichroism (IRLD)	305
5. Raman Spectroscopy and Microspectroscopy	313
6. Fluorescence Spectroscopy	322
7. NMR Spectroscopy	325
8. X-Ray Diffraction and Absorption	328
9. Conclusion	333
References	333
9. Polymer Networks: Elastomers	337
B. Erman and J.E. Mark	
1. Introduction	338
2. Structure of a Typical Network	339
3. Elementary and More Advanced Molecular Theories	341
4. Phenomenological Theories	351
5. Some Relevant Simulations	352
6. Swelling of Networks and Responsive Gels	356
7. Enthalpic and Entropic Contributions to Rubber Elasticity: The Force–Temperature Relations	358
8. Multimodal Elastomers	359
9. Liquid–Crystalline Elastomers	365
10. Novel Reinforced Elastomers	370
11. Further Comments on Some Characterization Techniques	374
Acknowledgement	376
References	377
SECTION IV: POLYMER DEGRADATION	
10. Polymer Degradation and Oxidation: An Introduction	387
John M. Chalmers and Robert J. Meier	
1. Introduction	388
2. Standard Tests and Comparative Methods	390
3. Spectroscopic Techniques	402
4. Thermal Methods	436
5. Chromatographic Analysis	442
6. Closing Remarks	447
Acknowledgement	448
References	448

11. The Role of Oxidation in Degradation of Polymers: The Relation of Oxidation to the Light Emission from Oxidized Polymers	451
Jozef Rychlý and Lyda Matisová-Rychlá	
1. Introduction, Historical Overview and Terminology Associated with the Degradation and Ageing of Polymers	452
2. Methodology and Analytical Techniques in Polymer Stability Studies	461
3. Mechanisms Leading to the Light Emission from Thermally Oxidized Polymers (Chemiluminescence), Similarities and Differences within Respective Groups of Polymers	463
4. General Classification of Chemiluminescence from Polymers	471
5. Comparison of Chemiluminescence for Isothermal and Non-Isothermal Conditions with those Obtained by DSC	476
6. The Effect of Initial Molar Mass on Chemiluminescence Runs	478
7. The Effect of Temperature on Chemiluminescence Intensity; The Mutual Relation of Isothermal and Non-Isothermal Studies	480
8. Relaxation Experiments (Jump Changes of Concentration of Oxygen, Temperature and Humidity) and Rate Constants of Respective Elementary Reaction Steps	482
9. The Effect of Antioxidants and Polymer Stabilizers	483
10. Isothermal Kinetics of Polymers Oxidation and Its Relation to the Concentration of Oxygen in Surrounding Atmosphere	487
11. The Effect of Alkaline Additives on Chemiluminescence Runs: A Possible Impact	490
12. Conclusions and Outline of the Further Perspectives	493
Acknowledgements	496
References	496
12. ESR and ESR Imaging Methods for the Study of Oxidative Polymer Degradation	499
Shulamith Schlick and Krzysztof Kruczała	
1. Introduction: Polymer Degradation in the Presence of Oxygen	500
2. Fundamentals of ESR and ESR Imaging	504
3. ESR as a Tool for the Study of Polymer Degradation	513
4. ESR Imaging: A Nondestructive Method for Spatially Resolved Polymer Degradation	517
5. Concluding Remarks	521
Acknowledgements	521
References	522
 SECTION V: POLYMER PRODUCT ANALYSIS 	
13. Spatial Imaging/Heterogeneity	527
Peter Wilhelm and Boril Chernev	
1. Introduction	527
2. Raman and FTIR Microscopy	529

3. Examples of Heterogeneous Polymers Investigated by IR and Raman Microscopy	538
4. Other Methods and Comparison of Methods	550
5. Conclusions	557
References	558

14. Additive Analysis **561**

John Sidwell

1. Introduction	562
2. Analytical Techniques for Additive Analysis	563
3. Analysis of Specific Additives	573
4. Future Developments in Analytical Methodology	603
References	605

15. Failure, Defect, and Contaminant Analysis **607**

James D. Rancourt, Jennifer Brooks, Sue Mecham,
Alan Sentman, Brian Starr and Jason Todd

1. Introduction	607
2. Case Studies	608
3. Summary	673
References	674

16. Surface Analysis **675**

John M. Chalmers and Robert J. Meier

1. Introduction	675
2. A Surface and Spatial Resolution	676
3. Adhesion	677
4. Polymer Degradation	679
5. Polymer Fracture	679
6. Characterizing Polymer Surfaces	679
7. Delamination	679
8. Cure	681
9. Closing Remark	682
References	682

SECTION VI: POLYMER AND POLYMER PRODUCT DEVELOPMENT: SUPPORT TECHNIQUES

17. The Supporting Role of Molecular Modelling and Computational Chemistry in Polymer Analysis **685**

John Kendrick

1. Introduction	686
2. Methodologies	687
3. Infrared and Raman Spectroscopy	693
4. Photoelectron Spectroscopy and Auger Electron Spectroscopy (AES)	703

5. Mass Spectrometry	712
6. X-Ray Diffraction	718
7. Nuclear Magnetic Resonance	722
8. Electron Spin Resonance	727
9. Summary	729
References	730

18. High-Throughput Analysis

735

Robert J. Meier

1. Introduction	735
2. Some General Considerations on MTE and the Corresponding Analytical Needs	737
3. Analytical Techniques for Medium-Throughput Polymer Analysis	740
4. Outlook	742
References	743
