FEATURES

PHYSICS AND COSMOLOGY

The First Few Microseconds

By Michael Riordan and William A. Zajc

Physicists have replicated the fantastically hot, dense conditions of the infant universe-with startling results

MEDICINE

Shutting Down Alzheimer's

By Michael S. Wolfe

This memory-destroying disease progresses through specific molecular processes. Strategic interventions could block them

BIOTECHNOLOGY

Blockbuster Dreams

By Gary Stix

New understanding of the biology behind a successful cancer therapy may lead to a drug treatment effective against an array of solid tumors

ASTRONOMY

Giant Telescopes of the Future

By Roberto Gilmozzi

Powerful new telescopes, hundreds of times stronger than current ones and capable of analyzing Earth-like planets around other stars, could be built in as little as a decade

EARTH SCIENCE

The Birth of the Mighty Amazon

By Carina Hoorn

Insight into how the world's largest river formed is helping scientists explain the extraordinary abundance of plant and animal life in the Amazon rain forest

HISTORY OF TECHNOLOGY

§ [When Slide Rules Ruled](#)

By Cliff Stoll

Before electronic calculators, the mechanical slide rule dominated scientific and engineering computation. Also: Make your own slide rule

INFORMATION TECHNOLOGY

§ [Bringing DNA Computers to Life](#)

By Ehud Shapiro and Yaakov Benenson

By tapping the natural computing power of biological molecules, researchers have built tiny machines that can speak directly to living cells
