INDEX

Barrage components, 31
  powerhouse, 38
  sluiceway, 36
  access dyke, 36
  closure dyke, 92
Bathymetric data, 20

Caisson projects, 72
  Hibernia, 73
  Kislaya Guba tidal power station, 74
  Murray prefabricated steel powerhouse, 76
  Scheldt Estuary control works, 73
  St. Petersburg storm-surge barrier, 74
Concrete caisson design, 82
  foundation considerations, 77, 81
  hydraulic considerations, 77
  stability assessment, 81
  stability forces, 82
  maximum water levels, 77
  minimum water levels, 79
  tidal currents, 80
  wave climate, 78
  wave runup, 79
Construction "in the dry," 76, *see also* La Rance Station, 195 and Annapolis Station, 204
Construction "in the wet," 69, advantages, 76, *see also* Caisson projects and Concrete caisson design

Database for planning, 47, 166
  continuous tide level data, 50
  estuarial ecosystems, 58, 176, 192
  estuary topography/bathymetry, 42
  geological characteristics of estuary, 171
  input for modeling tidal regime, 56
  sedimentation characteristics of estuary, 55
  seismicity of estuary region, 50
  tidal currents, 54
  wave climate, 54

Elements of Tidal-Electric Engineering. By Robert H. Clark
Copyright © 2007 the Institute of Electrical and Electronics Engineers, Inc.

Development schemes, 45
see also Retiming tidal energy
single-basin single-effect, 35–39
ebb generation, 36–39
flood generation, 36–39
pumping capability, 41, 44
Bay of Fundy studies, 41–42, 44
La Rance tidal power plant, 41
single-basin, double-effect, 36
pumping capability, 41, 44
linked basins, 42
paired basins, 45
Dykes, 87–95
access dykes, 89–92
alternative construction methods, 89
closure dykes, 92–95
water velocities, 90, 92
construction materials, 95
cost, 87
design factors, 88, 98

Economic analysis, 155–160, *see also* Sensitivity analysis
basic assumptions, 155
benefit/cost ratio, 164
cost parameters, 152
cost of capital, 155–56
fossil fuel costs, 155–57, 164
labor costs, 152, 162
discount rate, 151–52, 155–56
Electrical equipment, 114, *see also* Turbogenerating equipment
Environmental aspects, 171–74
agricultural, 174–75
benthic environment, 172
biological responses, 167, 174
regional climate changes, 170
erosion and sediment regimes, 171
fisheries, 177
floods and drainage, 174–75
planktonic environment, 172
recreation and tourism, 178
transportation, 179
water quality, 169–71
waterfowl, 179
Estuary numerical models, 62–67
calibration, 60

Factors influencing project economics, 20–21
external factors, 20–21
internal factors, 20
Feasibility studies, 22
Severn Estuary, 24, 255–59
Bay of Fundy, 30–32, 215–22
Finite grid element, definition, 64–65
grid sizes used for Bay of Fundy–Gulf of Maine model, 64

Mathematical model for barrage closure activities, 69
Modeling barrier effects, 67
Modeling techniques for tidal estuaries, 59, 63
finite difference method, 63–64
finite element method, 63–64
hydraulic models, 55, 59–62
numerical models, 52, 54, 59–60, 62–63, 65, 67
hybrid models, 59, 61, 67
Modeling plant output
Bay of Fundy Tidal Power Reassessment Study, 121
one-cycle dynamic programming model, OCDPM, 122
maximum energy operation, 122–23
single-tide optimization model, STOM, 121, 123

Operation for maximum energy, 122
Optimizing plant output, 117
cost-related, 118
operating, 117–119
principal variables, 117
Origin of tides, 9–12

Plant output
factors determining output, 16
optimization, 117–24, 127–28
effect of varying numbers of sluices and turbines, 119
operation simulation, 120
optimum combination of turbine and sluiceway capacities 118–19
Plant operational modes, 34–38, 124
double-effect operation, 36, 38–39

single-effect operation, 35, 37–39
complex modes of operation, 124
Potential tidal power sites worldwide, 209
factors influencing exploitation, 221
Powerhouse caissons, 81, 84, 222, 241, *see also* Concrete caisson design
Project economics, 20, 21, 199, *see also* Economic analysis

Retiming tidal energy, 44, *see also* Tidal energy storage options
Risk assessment, 157, 160

Sensitivity analysis, 155, 160, *see also* economic analysis
nuclear penetration in system, 155–56
Simulation models to analyze viability of alternative generation expansion programs, 141, 145
Chronological Absorption of Tidal Output (CATO), 145
Optimum Mix (OPTMIX), 146
Production Cost (PROCOX), 145
Tidal Capacity Correction (TCC), 145
Site investigations, 81–82
Site potential, 17
annual energy production, 18, 22–24, 109, 121, 126, 215, 226
gross energy potential, 17
Site selection, 15, 20, 22, 24, 223
criteria, 21, 24, 54, 78–79, 86, 88, 92, 113, 142–43, 146, 266
short listing of sites, 24
assessment factors, 31, 48
Socioeconomic impacts, 161
Sluiceway caissons, 61, 81, 85, 87–88, 244, *see also* Concrete caisson design
Sluiceway gates, 17, 86, 178
design criteria, 21, 57, 86, 88, 92
radial gates, 86–87
vertical lift gates, 86–87
Sustainability, 6
System generation expansion, 129, 140, 145, 149, 153, 155–56
lead times to commissioning, 141
market analysis, 143–44
system simulation, 136–37, 142, *see also* Simulation models

Tidal ebb and flow energy, 1
Tidal currents, construction effects on, 95
Tidal-electric power plants in operation, 181, *see also* Tidal ranges in estuaries
Annapolis, 5, 102–103, 105, 177, 181–83, 198–206, 264, 266, 268
Jiangxia, 5, 183, 194–95, 226
Kislaya Guba, 73–74, 195–96, 234–35, 238, 264
La Rance, 4–5, 41, 72, 102, 178–79, 181–85, 187–89, 191–93, 195, 226, 253, 264–65, 269–70
Tidal energy absorption, 136, 267
dynamic absorption capability of system, 135
load-following capability, 135–36, 143
"must-run" generation, 136, 143, 146
raw tidal energy asorption, 136, 267
static absorption capability of system, 143
system load allocation, 141
Tidal energy storage options, 137 *see also* Development schemes
auxiliary capacity, 137, 138
compressed-air energy storage, 45, 137, 139–40
coordinated operation with river hydro, 137
pumped storage, 40, 137–39, 162, 165, 218, 268, 272
Tidal mills, 2–5
operation, 1–3
Woodbridge Tide Mill, Deben Estuary, England, 3
Slade's mill, Chelsea, Mass., 3
mill in La Rance estuary, France, 72
Tidal range in estuaries, 18
barrage effect, 13, 23, 67
Bay of Fundy, 5, 10, 13, 19, 30–32, 41–42, 44, 52, 56, 59, 64, 66–69, 76, 83–84, 90–92, 94, 98, 105, 109–10, 121–22, 126–27, 130, 136, 140, 144, 159, 166, 170, 175–76, 198, 206, 215–17, 221 224, 237, 245, 256, 262–67, 271, 275
Annapolis Basin, 5
Cobequid Bay, 13, 51, 110, 222

Cumberland Basin, 13, 42, 67, 92, 138, 170, 219–20, 222, 263
Minas Basin
Coriolis effect, 13, 64, 256
Jiangxia Inlet, 5
Kislaya Guba, 73–74, 195–97, 235, 238, 264
La Rance estuary, 4–5, 41, 72, 102, 178–79, 181, 183–85, 187–89, 191–93, 195, 226, 253, 264–5, 269–70
resonance effect, 12–13, 48, 67, 170, 257

Tidal range in oceans, 18, 222, 243
Tidal stream, 7, 266
Tide coefficients, 19, 62, 123, 127
Tide types, 9, 19, 56, 172
anomalistic tide, 9–11, 19
anomalistic month, 9
apogee, 9, 11
perigee, 9, 11, 19
declinational tide, 9, 11, 19
diurnal, 8, 12, 19, 22, 51, 85, 121–24, 223, 257, 259–60
diurnal inequality, 12, 19, 22, 121–24, 232
semidiurnal, 7, 12–13, 15, 42, 51, 67, 188, 208, 231, 259–60
mixed tide, 9
synodic tide, 9, 19
synodic month, 9
spring tide, 92, 129, 188–89, 191, 211, 237
neap tide, 10, 41, 188–89, 191
Transmission to remote and local markets, 114
Turbines, 5, 8, 20–21, 23–24, 34–44, 61, 68, 75, 79, 84–85, 97–101, 103, 106, 109–12, 118–20, 122–27, 131, 140, 156, 163, 177–78, 180, 184, 188–95, 197, 202, 212, 222, 230, 232–33, 235, 237–38, 241, 243, 245, 248, 250, 252, 257, 265
Straflo, 5, 102–06, 194, 198, 202, 206, 210–11, 222, 264, 266, 270
bulb, 5, 75, 99–103, 110–14, 184, 187, 191–95, 210–12, 215, 230, 232–33, 238, 265
tubular, 99–100, 203
vertical Kaplan, 99, 101
Turbine output regulation, 45, 101, 104, 106, 109, 132
double regulation, 101, 106, 109
adjustable runner blades, 106, 257
fixed runner blades, 107–109
variable guide vanes, 106, 108
Turbine specific speed, 99, 112
Turbine runner diameter, 99, 112–23, 127
Turbine generator, 106, 140, 241, 243
Turbogenerating equipment, 97, 117
see also Turbines and and Turbine generator
percent of project cost, 121
project design factors, 52, 105, 113, 160, 167, 195, 199, 214–15, 219, 234, 239, 240, 242, 272
