## Subject Index

### a

- absolute roughness 19
- acceleration 4
- adiabatic
  - expansion of gas 146
  - index 93
  - velocity of sound in gas 141
- air density 4
- Altshuler formula 21
- analytical solution 88
- angular velocity of impeller rotation 77
- anti-turbulent additive 62
- apparent viscosity 36
- area of pipeline cross-section 7
- average
  - physical parameter 4
  - tangential stress 52
  - velocity 52

### b

- balance equation of forces 76
- barotropic
  - gas 15
  - fluid 15
  - medium 13
- basic measurement units, *see*  
*primary measurement units*
- batching 187
- Bernoulli equation 15
- Blasius formula 21
- boundary condition 46
- Boussinesq force 150
- bringing of model equations to  
dimensionless form 183
- Buckingham  $\Pi$ -theorem 164

### c

- calorimetric dependences 30
- capillary viscometers 49
- Cauchy problem, *see* *initial value problem*
- central theorem of dimensional theory 163
- centrifugal
  - blower 98
  - force 76
  - pump 76
- change of total energy 22
- characteristic equation 118
- characteristics of wave equation 119
- Chezy factor 67
- circular pipe 45
- Clapeyron law 28
- Clapeyron equation 39
- closed mathematical model 2
- closed mathematical model of  
one-dimensional
  - non-stationary flows of fluid and  
gas in pipelines 109
- closing relations 30
- combined operation of linear pipeline  
section and
  - pumping station 81
- commercial flow rate of gas 96
- compatibility condition 119
  - at characteristics 142
- compressibility 3
  - factor 34
- compressible medium 28
- compression wave 152
- concentration of anti-turbulent additive 63
- compressor 16

- concrete mathematical model 2
- conditions at discontinuities (jumps) of hydrodynamic
  - parameters 128
- conditions of transition from laminar to turbulent flow 51
- conjugation conditions 124
- conservation law of transported medium mass 7
- continuity equation 7
- continuum 3
- convective diffusion 188
- Coriolis factor 6
- correctness of the model 2
- criteria of
  - dynamic similarity 178
  - geometric similarity 178
  - transition from laminar to turbulent flow 51
- critical
  - depth 151
  - isotherm 38
  - point of gas 38
  - pressure 40
  - Reynolds number 52
  - temperature 40
  - velocity 51
- d**
- D’alambert formulas 117
- damping of pressure bow shock at wave front of hydraulic shock 133
- Darcy-Weisbach
  - law 48
  - relation 67
- density of
  - internal energy 6
  - medium 5
  - transported 7
- dependences characterizing internal structure of medium flow 30
- derived measurement units, *see secondary measurement units*
- descending sections of pipeline 68
- developed turbulent flow 52
- differential
  - equation of longitudinal mixing 194
  - head 17
  - of pump 180
- differentiation of integral quantity regarding fluid volume 7
- dilatant fluid 37
- dimensional
  - formula 159
  - quantities 158
- dimensionality of quantities 159
- dimensional theory 157
- dimensionless quantities 157
- dimensional-dependent quantities 164
- dimensional-independent quantities 164
- direct hydraulic shock 131
- discharge line 17
- discontinuity of
  - flow rate 126
  - velocity 126
- dissipation of mechanical energy 15
- divergence of vector 144
- divergent form of differential equations 143
- drag force 4
- dynamic pressure 8
- dynamic
  - velocity 55
  - viscosity 33
- e**
- effective factor of longitudinal mixing 192
- efficiency of the model 2
- elastic
  - modulus 34
  - spring 1
- elasticity 3
- elementary surface 32
- energy equation 24
- energy of material point system 6
- enforced flow 67
- enthalpy 25
- equation for
  - head before oil-pumping stations 84
  - variation of pressure jump 133
- equation of
  - fluid motion 9
  - heat inflow 24
  - internal motion kinetic energy change 17
  - mechanical energy balance 11
  - medium state 29
  - pipeline state 30
  - state 30
  - total energy 29
- Euclidian geometry 2
- Euler function 90
- Eulerian derivative, *see partial derivative*

- external
  - force 9
  - inflow of heat 22
  - sources of mechanical energy 24

**f**

- factor of
  - dynamic viscosity 33
  - kinematic viscosity 33
  - volume expansion 35
- feed 76
- filling degree of gravity flow 151
- first law of thermodynamics 22
- flow
  - in hydraulic smooth pipe 21
  - core 50
  - curve 36
- fluid particle of transported medium 7
- fluid volume 193
- force of dry friction 2
- force of viscous friction 2
- formation of oil product mixtures in contact zones 188
- friction
  - factor 20
  - force 13
- Froude number 177
- fundamental laws of continuum physics 4
- Funning factor 20

**g**

- gas
  - compression 100
  - compressor station (GCS) 100
  - constant 28
  - enthalpy 105
  - isotherm 38
  - outflow from a pipeline 146
  - specific capacity at constant pressure 28
- gas-pumping aggregates (GPA) 98
- gate valve 127
  - closing 153
- generalized
  - Reynolds number 48
  - theory of hydraulic shock 154
- geometric
  - head 14
  - modeling 173
  - similarity 174

- governing factors 3
- gravity
  - acceleration 4
  - flow 66
    - of incompressible fluid in a pipeline 186
  - force 9
  - stratified flow 66

**h**

- head 75
  - balance equation 81
  - before pump 81
  - before pumping station 80
- head-discharge ( $Q - H$ ) characteristic of pump 76
- heat
  - conduction equation 194
  - conductivity 3
  - energy inflow 23
  - exchange between transported medium and environment 30
  - flux 23
- heat-transfer factor 26
- height of pipeline axis above sea level 5
- Hedstroem number 62
- homogeneous fluid 15
- homogeneous incompressible fluid 15
- Hooke law of elasticity 43
- hydraulic
  - dependence 30
  - gradient 15
  - hammer 42

- hypothesis of quasi-stationarity 109

**i**

- Ilyushin number 51
- impeller 76

incident wave 134  
 incompressible  
   –fluid 8  
   –medium 18  
 independent dimensionless  
   combinations 4  
 individual  
   –derivative 11  
   –particle of continuum 6  
 inertial properties of fluid in non-  
   stationary processes 112  
 initial and boundary conditions  
   124  
 initial value (Cauchy) problem 2  
 input of external energy 16  
 integral characteristics of fluid  
   volume 5  
 integral with variable integration  
   limits 13  
 interaction of waves in pipeline  
   section 120  
 intermittency factor 21  
 internal energy 23  
   –of fluid volume 6  
 international system of  
   measurement units SI  
   158  
 invariant form 4  
   –of equations 153  
 isotherm of real gas 38  
 iteration method 81

**j**

Joukowski formula 93  
 Joule–Thompson  
   –effect 94  
   –factor 93  
 jump of parameter at discontinuity  
   front 128

**k**

Karman  
   –constant 54  
   –formula 54  
   –model 61  
 kinematic  
   –consistency 62  
   –viscosity 19  
 kinetic energy 11  
   –of fluid volume 6  
   –of internal motion relative mass  
     centre 12  
   –of particle mass centre 12  
 kinetic head 14

**l**

Lagrangian derivative, *see individual  
 derivative*  
 laminar flow  
   –of non-Newtonian Ostwald power fluid  
     in circular pipe 47  
   –of viscous fluid 45  
   –of viscous-plastic fluid in circular pipe  
     49  
   –regime 12  
 law of  
   –longitudinal mixing 192  
   –momentum change 9  
   –total energy conservation 22  
 limit shear stress 37  
 line of hydraulic gradient 16  
 local derivative with respect to time 6  
 longitudinal mixing 189  
 loss of head in Darcy-Weisbach form 20

**m**

Mach number 185  
 mass 4  
   –conservation law 7  
 mass flow rate 5  
   –of fluid volume 5  
   –of material point system 5  
 mathematical model 1  
   –of centrifugal blower operating in  
     stationary regime 101  
   –of mixture formation 190  
   –of non-stationary gravity fluid flow  
     149  
   –of pump 75  
   –of slightly compressible fluid 109  
 mathematical modeling 1  
 mean asperity height of pipeline internal  
   surface 19  
 mean flow rate velocity 46  
 measurement units 157  
 mechanical energy  
   –balance equation 11  
   –energy change law 14  
 medium macroscopic volume 3  
 mesh cell 144  
 method of  
   –characteristics 121  
   –successive approximation, *see iteration  
     method*  
 mixture volume 146  
 model 1  
 model of  
   –fluid baric and heat expansion 34
